Behringer X Air XR18 Tablet-Controlled Digital Mixer User Manual

Model: X AIR XR18 | Brand: Behringer

1. INTRODUCTION

The Behringer X Air XR18 is an 18-channel, 12-bus digital mixer designed for iPad/Android tablets, featuring 16 gain-programmable Midas preamps. It integrates a multichannel USB audio interface and a built-in Wi-Fi module, offering versatile control and recording capabilities for live sound and studio applications.

2. SETUP GUIDE

2.1 Physical Connections

Before powering on the XR18, ensure all necessary audio and network connections are made. The unit features 16 XLR/TRS combo inputs with Midas preamps, 6 Aux outputs, Main L/R outputs, and a dedicated Phones output. Connect microphones, instruments, and other audio sources to the appropriate inputs. For network control, use either the built-in Wi-Fi or the Ethernet port.

2.2 Powering On

Connect the provided power cable to the AC input on the side of the unit. Ensure the power switch is in the 'Off' position before connecting to a power outlet. Once connected, flip the power switch to 'On'. The power indicator LED will illuminate.

2.3 Wireless Setup (Wi-Fi)

The XR18 features an integrated Wi-Fi module, allowing for wireless control via a tablet or computer. The unit can operate in three Wi-Fi modes: Access Point (AP), Wi-Fi Client, and Ethernet. For quick setup, the AP mode creates its own network. For more stable connections in complex environments, Wi-Fi Client mode allows the XR18 to join an existing network, or a direct Ethernet connection can be used.

2.4 Software Installation

To control the XR18, download the dedicated X AIR app for your iPad, Android tablet, or computer (PC/Mac/Linux). The app provides a comprehensive interface for mixing, effects processing, and routing. Ensure your control device is connected to the XR18's network (either directly via AP mode or through a shared Wi-Fi network in Client mode).

3. OPERATION

3.1 Channel Management

The X AIR app provides intuitive control over all 18 input channels. Adjust gain, EQ, dynamics, and send levels for each channel. The 16 Midas-designed preamps ensure high-quality audio capture. Channels 17/18 are dedicated line inputs for stereo sources.

3.2 USB Audio Interface

The XR18 functions as an 18x18 channel, bi-directional USB audio interface, allowing direct recording and playback with your Digital Audio Workstation (DAW). This feature is ideal for multi-track recording of live performances or studio sessions.

3.3 Personal Monitoring (Ultraset)

Utilize the ULTRANET port for seamless integration with Behringer's P16 Personal Monitoring System. This allows musicians to create their own custom monitor mixes, reducing stage clutter and improving performance clarity.

3.4 Effects Processing

The XR18 includes a virtual FX Rack with four true-stereo (8-mono) multi-effects processors, featuring studio-quality reverbs, delays, chorus, and more. These effects can be assigned to any input channel or bus, enhancing your mix with professional-grade sound.

3.5 Headphone Output

A dedicated Phones output with an individual level control is provided for direct monitoring. This allows for private listening to the main mix or a specific bus, which is useful for sound checks or personal monitoring during recording.

4. MAINTENANCE

To ensure the longevity and optimal performance of your Behringer X Air XR18, regular maintenance is

recommended. Keep the unit clean by wiping it with a soft, dry cloth. Avoid using abrasive cleaners or solvents. Ensure all vents are clear of dust and debris to prevent overheating. Periodically check all cable connections for secure fit and signs of wear.

It is crucial to keep the X AIR app and the XR18's firmware updated to the latest versions. Firmware updates often include performance enhancements, bug fixes, and new features. Refer to the Behringer website for the most current software and firmware downloads and update instructions.

5. TROUBLESHOOTING

5.1 Connectivity Issues

- **No Wi-Fi Connection:** Ensure the XR18's Wi-Fi mode switch is set correctly (AP or Client). If in AP mode, check for the XR18's network on your control device. If in Client mode, verify the XR18 is connected to your router and your control device is on the same network. Try restarting both the XR18 and your control device.
- **Ethernet Connection Problems:** Confirm the Ethernet cable is securely connected to both the XR18 and your computer/router. Check network settings on your computer to ensure it's configured for a wired connection.

5.2 Audio Issues

- **No Sound Output:** Verify that input channels are active and gain levels are set appropriately. Check main mix faders and ensure mute buttons are disengaged. Confirm that output cables are correctly connected to your speakers/amplifiers.
- **Distorted Sound:** Reduce input gain levels if clipping indicators are active. Check for proper impedance matching between sources and inputs. Ensure output levels are not overdriving connected equipment.
- **Feedback:** Lower microphone gain, adjust monitor levels, or use the built-in EQ to cut problematic frequencies. Ensure microphones are not pointed directly at speakers.

5.3 Software Glitches

- **App Not Connecting:** Close and reopen the X AIR app. Restart the XR18. Ensure your control device's operating system is compatible with the app version.
- **Unresponsive Controls:** Check network stability. A weak Wi-Fi signal can cause delays or unresponsiveness. Consider using a wired Ethernet connection for critical applications.
