7. TROUBLESHOOTING

If you encounter issues with your access point, refer to the following common troubleshooting steps:

- **No Power:**
 - Ensure the power adapter is securely connected to both the access point and a working power outlet.
 - Verify the power outlet is functional by plugging in another device.
- **No Network Connectivity:**
 - Check the Ethernet cable connection between the access point and your network device.
 - Verify that your network switch or router is operational.
 - Confirm that the access point has obtained a valid IP address (check via the management interface).
- **Poor Wireless Performance:**
 - Relocate the access point to a more central position or away from potential interference sources.
 - Check for overlapping Wi-Fi channels with neighboring networks and adjust your access point's channel if necessary.
 - Ensure client devices are within optimal range.
- **Factory Reset:** If the device is unresponsive or you need to revert to default settings, perform a factory reset. Consult the full product documentation for the specific procedure, which typically involves pressing and holding a reset button for a certain duration.
