1. Setup and Installation

1.1 Unpacking

- Remove all packaging materials, including tape and protective films.
- Dispose of packaging materials responsibly. Keep plastic bags away from children.

1.2 Location Requirements

- Place the refrigerator on a firm, level floor capable of supporting its weight.
- Allow at least 10 cm (4 inches) of space behind the refrigerator and 5 cm (2 inches) on the sides and top for proper air circulation.
- Avoid direct sunlight and proximity to heat sources such as stoves, ovens, or radiators.
- Ensure the ambient temperature is between 10°C (50°F) and 43°C (110°F) for optimal performance.

1.3 Electrical Connection

- Connect the refrigerator to a dedicated, grounded 120V, 60Hz AC outlet.
- Do not use extension cords or adapter plugs.
- Ensure the electrical circuit is protected by a fuse or circuit breaker.

1.4 Initial Cleaning

- Before first use, clean the interior and exterior surfaces with a mild detergent and warm water. Rinse thoroughly and dry.

2. Operating Instructions

2.1 Temperature Control System

The Whirlpool WT-2211D features a dual temperature control system, allowing independent adjustment of the refrigerator and freezer compartments.

- **Refrigerator Control:** Located inside the fresh food compartment. Adjust to a setting between "Min" (warmer) and "Max" (colder). A mid-range setting is typically recommended for general use.
- **Freezer Control:** Located inside the freezer compartment. Adjust to a setting between "Min" (warmer) and "Max" (colder). For optimal freezing, set to a colder position.
- Allow several hours for the refrigerator to reach desired temperatures after initial setup or adjustment.

2.2 Food Storage Guidelines

- **Fresh Food Compartment:** Store fruits, vegetables, dairy products, and cooked foods. Use drawers for produce and shelves for other items.
- **Freezer Compartment:** Store frozen foods. Ensure packages are sealed to prevent freezer burn.
- Do not overload the refrigerator, as this can impede air circulation and cooling efficiency.

2.3 Energy Saving Tips

- Avoid opening the doors frequently or for extended periods.
- Allow hot foods to cool to room temperature before placing them in the refrigerator.
- Ensure door seals are clean and free of obstructions to maintain a tight seal.

3. Maintenance and Care

3.1 Cleaning the Interior

- Unplug the refrigerator before cleaning.

- Wash interior surfaces, shelves, and drawers with a solution of mild soap and warm water.
- Rinse with clean water and dry thoroughly.
- Do not use abrasive cleaners, scouring pads, or harsh chemicals.

3.2 Cleaning the Exterior

- Clean the exterior with a soft cloth dampened with mild soap and water.
- Wipe door gaskets with a clean cloth to ensure a proper seal.

3.3 Condenser Coil Cleaning

- Periodically clean the condenser coils located at the back or bottom of the refrigerator.
- Use a vacuum cleaner with a brush attachment to remove dust and debris. This improves efficiency.

3.4 Vacation and Moving Care

- **Short Vacations:** Leave the refrigerator operating.
- **Long Vacations:** Unplug the refrigerator, empty all food, clean thoroughly, and leave doors ajar to prevent odors and mold.
- **Moving:** Secure all loose items inside, tape doors shut, and transport in an upright position.

4. Troubleshooting Guide

Before contacting service, review the following common issues and solutions:

Problem	Possible Cause	Solution
Refrigerator does not operate.	No power supply; power cord unplugged; circuit breaker tripped.	Check power connection; reset circuit breaker.
Refrigerator is not cold enough.	Temperature control set too warm; door opened too frequently; warm food placed inside; poor ventilation.	Adjust temperature control to a colder setting; minimize door openings; allow food to cool before storing; ensure proper clearance around the unit.
Excessive noise.	Refrigerator not level; items vibrating inside; condenser fan obstruction.	Level the refrigerator; rearrange items; clean condenser coils.
Water on floor.	Drain tube clogged; drip pan overflowing.	Clear drain tube; empty and clean drip pan.
Frost buildup in freezer.	Door not sealing properly; door opened too often; high humidity.	Check door gasket for damage or obstructions; minimize door openings.
