SETUP AND INSTALLATION

Important Safety Information: Installation of electrical components should only be performed by a qualified electrician or a person with adequate knowledge of electrical systems. Always ensure power is turned off at the circuit breaker before beginning any electrical work.

- 1. **Prepare the Area:** Ensure the electrical box is properly installed and all wiring is securely connected to the appropriate electrical device (e.g., switch, outlet).
- 2. **Mount the Device:** Secure the electrical device (e.g., switch, outlet) to the electrical box using the provided screws. Ensure it is flush with the wall surface.
- 3. **Position the Wall Plate:** Align the VIMAR Plana Series wall plate over the mounted electrical device. The plate is designed for a screw-in installation method, typically utilizing the screws that secure the device to the box.
- 4. **Secure the Plate:** Gently tighten the screws until the wall plate is firmly in place and flush against the wall. Do not overtighten, as this may damage the plate or the electrical device.
- 5. **Restore Power:** Once the installation is complete and all components are securely in place, restore power at the circuit breaker.

If you are unsure about any step, consult a professional electrician.

OPERATION

The VIMAR Plana Series wall plate functions as a decorative and protective cover for electrical switches, outlets, or other modules within the VIMAR Plana system. Once installed, it provides a finished appearance and helps to protect the internal electrical components from dust and minor impacts. Its operation is passive, serving as an aesthetic and protective barrier. Ensure that the electrical devices it covers are functioning correctly according to their own instructions.

MAINTENANCE

To maintain the appearance and longevity of your brushed aluminium wall plate, follow these simple cleaning guidelines:

- Regular Cleaning: Wipe the surface with a soft, damp cloth. For best results, use a microfiber cloth.
- **Mild Soap Solution:** For more stubborn marks, a mild soap solution (e.g., dish soap diluted in water) can be used. Apply with a soft cloth, then wipe clean with a separate damp cloth to remove any soap residue.
- **Drying:** Always dry the plate immediately with a clean, dry cloth to prevent water spots, especially on brushed finishes.
- Avoid Harsh Cleaners: Do not use abrasive cleaners, scouring pads, ammonia-based cleaners, or any products containing bleach or strong acids, as these can damage the brushed aluminium finish.

Troubleshooting

If you encounter issues with your VIMAR Plana Series wall plate, consider the following:

· Plate Does Not Sit Flush:

- Ensure the electrical device (switch/outlet) is properly seated and secured within the electrical box.
- Check for any obstructions behind the plate or within the electrical box.
- · Verify that the screws are tightened evenly.

Scratches or Damage:

- Minor scratches on brushed aluminium may sometimes be less noticeable, but significant damage may require replacement.
- Avoid using sharp objects or abrasive materials near the plate.

• Discoloration:

- Ensure you are using only recommended cleaning methods. Harsh chemicals can cause discoloration.
- Environmental factors like prolonged exposure to direct sunlight or extreme humidity are generally not an issue for indoor wall plates but can affect finishes over very long periods.

For issues related to the electrical components behind the plate, consult a qualified electrician.
