Flexible Flyer 666N

Flexible Flyer Winter Trek 3-Person Large Snow Sled Instruction Manual

Model: 666N

1. PRODUCT OVERVIEW

The Flexible Flyer Winter Trek Sled is a versatile, heavy-duty pull snow sled designed for both recreational use and utility tasks. Measuring 5.5 feet (66 inches) long, it can accommodate up to 3 riders or carry substantial gear, supporting a combined weight of approximately 300 lbs. Its slick, hard plastic base with molded grooves ensures smooth tracking, stability, and strength on snow and ice. Reinforced sidewalls enhance durability on rugged terrain. This sled is equipped with a heavy-duty tow rope for easy pulling and also serves as a handle during downhill sledding. Constructed from durable high-density polyethylene (HDPE) plastic, it is built to withstand repeated use season after season.

2. SETUP

The Flexible Flyer Winter Trek Sled comes pre-assembled with a heavy-duty tow rope. No additional assembly is required.

2.1 Attaching the Tow Rope

The tow rope is pre-threaded through the designated holes at the front of the sled. Ensure the rope is securely knotted to prevent detachment during use. The rope should be long enough to allow comfortable pulling without the sled bumping into the user's heels.

3. OPERATING INSTRUCTIONS

3.1 Downhill Sledding

- **Seating:** The sled is designed for up to 3 riders. Ensure all riders are seated securely within the sled, facing forward.
- **Holding On:** The tow rope can be used as a handle for stability while sledding downhill. Riders should hold onto the rope or the sled's sides.
- **Steering:** Lean your body in the desired direction to steer the sled. The molded grooves on the base assist with tracking.
- **Safety:** Always choose a clear, unobstructed path for sledding. Ensure the area at the bottom of the hill is free of obstacles. Adult supervision is recommended for children.

3.2 Utility Hauling

The Winter Trek sled is ideal for transporting various items across snow or ice.

- **Loading:** Place items evenly within the sled to maintain balance. Avoid overloading beyond the recommended weight capacity of 300 lbs.
- **Securing Items:** For unstable or loose items, consider using bungee cords or additional ropes to secure them to the sled's sidewalls to prevent shifting or loss during transport.
- **Pulling:** Use the heavy-duty tow rope to pull the sled. Maintain a steady pace, especially over uneven terrain.

3.3 Safety Guidelines

- Always wear appropriate winter clothing, including helmets, when sledding.
- Sled in designated areas free from trees, rocks, fences, and other hazards.
- Avoid sledding on or near roads, driveways, or frozen bodies of water unless specifically designated safe.
- Do not sled headfirst or on your stomach.
- Ensure the sled is not damaged before each use.

4. MAINTENANCE

The Flexible Flyer Winter Trek Sled is constructed from durable high-density polyethylene (HDPE) plastic, designed for longevity.

- **Cleaning:** After use, wipe down the sled with a damp cloth to remove snow, ice, and dirt. For stubborn grime, a mild

soap solution can be used. Rinse thoroughly and dry before storage.

- **Storage:** Store the sled in a cool, dry place away from direct sunlight when not in use to prevent material degradation.
- **Inspection:** Periodically inspect the sled for any signs of damage, such as cracks or deep scratches, especially on the base and sidewalls. Check the tow rope for fraying or wear. Replace the sled or rope if significant damage is found to ensure safety.
- **Performance Enhancement:** For extra speed and ease of glide, a thin layer of wax can be applied to the flat bottom surface of the sled.

5. TROUBLESHOOTING

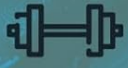

- **Sledding too slow:** Ensure the snow conditions are optimal (not too powdery or slushy). Apply a thin layer of sled wax to the bottom for improved glide.
- **Difficulty steering:** Practice leaning your body to control direction. Ensure the sled is not overloaded or unevenly weighted.
- **Sled damage:** If the sled incurs significant damage (e.g., large cracks, broken sections), discontinue use immediately to prevent injury.

6. SPECIFICATIONS

DESIGNED FOR FAMILY & UTILITY

HIGH-DENSITY PLASTIC

HEAVY-DUTY TOW ROPE

MADE IN THE USA

Image 6.1: Visual representation of sled dimensions and maximum weight.

Feature	Detail
Brand	Flexible Flyer
Model Number	666N
Material	High-Density Polyethylene (HDPE) Plastic
Color	Blue
Product Dimensions (L x W x H)	66" x 20" x 6"
Item Weight	7 Pounds
Maximum Weight Recommendation	300 Pounds
Occupancy	Up to 3 people

Included Components	Large plastic sled, tow rope
Age Range Description	Adult (Recommended for ages 4 and up)
