SETUP AND INSTALLATION

This faucet is designed for widespread installation with separate hot and cold water handles. Follow these steps for proper installation:

1. **Prepare the Sink:** Ensure the sink or countertop has three pre-drilled holes for widespread faucet installation. Clean the area thoroughly.
2. **Install Handles:** Insert the hot and cold water handles into their respective holes. Secure them from underneath the sink using the provided washers and nuts. Ensure they are oriented correctly for operation.

3. **Install Spout:** Insert the faucet spout into the center hole. Secure it from underneath with the provided washer and mounting nut. Ensure the spout is facing forward.
4. **Connect Water Lines:** Connect the hot and cold water supply lines to the corresponding inlets on the faucet handles. Use thread sealant tape on all threaded connections to prevent leaks. Connect the spout's water inlet to the hot and cold water lines using the provided connectors or flexible hoses.
5. **Test for Leaks:** Slowly turn on the main water supply. Check all connections for leaks. If any leaks are detected, tighten the connections as necessary.
6. **Flush the Faucet:** Remove the aerator from the spout. Turn on both hot and cold water for a few minutes to flush out any debris from the water lines. Turn off the water, reattach the aerator, and check for proper flow.

This faucet is designed to operate effectively with low water pressure. Refer to the pressure table for minimum operating pressure requirements:

OPERATING INSTRUCTIONS

The Foset Element ELF-81N faucet features two metal handles and a ceramic cartridge for smooth operation.

- **Cold Water:** Turn the right handle counter-clockwise to open the cold water flow. Turn clockwise to close.

- **Hot Water:** Turn the left handle counter-clockwise to open the hot water flow. Turn clockwise to close.
- **Mixing Water:** Adjust both handles to achieve the desired water temperature and flow rate.
- The ceramic cartridge ensures a smooth and easy 1/4 turn opening and closing action.

MAINTENANCE

Regular maintenance will help preserve the finish and functionality of your faucet.

- **Cleaning the Finish:** Clean the satin finish regularly with a soft cloth and mild soap and water. Rinse thoroughly and dry with a soft cloth to prevent water spots. Avoid abrasive cleaners, harsh chemicals, or scouring pads, as these can damage the finish.
- **Aerator Cleaning:** If water flow becomes restricted, the aerator may be clogged. Unscrew the aerator from the tip of the spout, clean any debris or mineral deposits, and rinse thoroughly before reattaching.
- **Cartridge Replacement:** If the faucet drips or leaks from the handles, the ceramic cartridge may need replacement. Turn off the water supply, remove the handle, and replace the cartridge according to the manufacturer's instructions for cartridge replacement (specific instructions not provided in this manual, consult a professional if needed).

TROUBLESHOOTING

Problem	Possible Cause	Solution
Low Water Flow	Clogged aerator; partially closed shut-off valve; low water pressure.	Clean the aerator. Ensure shut-off valves are fully open. Check main water pressure.
Faucet Drips/Leaks from Spout	Worn ceramic cartridge.	Replace the ceramic cartridge.
Leaks at Base of Faucet	Loose mounting nut; worn O-rings/gaskets.	Tighten mounting nut. Inspect and replace O-rings/gaskets if damaged.
Water Temperature Issues	Incorrect hot/cold water line connection; water heater issues.	Verify hot and cold lines are connected correctly. Check water heater settings.
