Troubleshooting

Problem	Possible Cause	Solution
Can opener not gripping the can.	Incorrect positioning or insufficient pressure.	Ensure the cutting wheel is correctly aligned with the can's rim and apply firm, even pressure to the handles until it locks.
Difficulty turning the knob.	Opener not properly engaged or can is dented.	Re-position the opener. If the can is severely dented, try another area or a different can.
Lid not fully separated.	Not enough rotations or uneven pressure.	Continue rotating the knob until resistance significantly decreases, ensuring a full rotation around the can.
