6. Maintenance and Cleaning

Regular cleaning and maintenance will prolong the life of your kettle.

- **Before Cleaning:** Always unplug the kettle from the power outlet and allow it to cool completely before cleaning.
- **Exterior Cleaning:** Wipe the exterior of the kettle with a soft, damp cloth. Do not use abrasive cleaners or scouring pads, as these can damage the finish.
- **Interior Cleaning / Descaling:** Over time, mineral deposits (limescale) may build up inside the kettle, especially in hard water areas. To descale, fill the kettle with a mixture of water and white vinegar (e.g., 1 part vinegar to 2 parts water) or a commercial descaling solution. Boil the mixture and let it stand for at least 30 minutes, or longer for heavy deposits. Empty the kettle and rinse thoroughly with fresh water several times.
- **Removable Filter:** The kettle features a removable filter. To clean, remove it from the spout and rinse under running water. Use a soft brush if necessary to remove any deposits. Reinsert the filter securely after cleaning.
- **Storage:** When not in use, the power cord can be conveniently stored in the base. Store the kettle in a dry place.

7. Troubleshooting

If you encounter any issues with your kettle, please refer to the following common problems and solutions:

- **Kettle does not turn on:**

- Check if the kettle is properly plugged into a working power outlet.
- Ensure the kettle is correctly seated on its power base.
- Verify that the power switch is pressed down.

- **Water is not boiling:**

- Confirm the power switch is engaged and the indicator light is on.
- Check for limescale buildup, which can affect heating efficiency. Descale if necessary.

- **Kettle switches off too quickly or not at all:**

- Ensure the lid is fully closed.
- Excessive limescale can interfere with the automatic shut-off mechanism. Descale the kettle.
- If the issue persists, discontinue use and contact customer support.
