EPAuto CP134

EPAuto CP134 (CF10134) Premium Cabin Air Filter Instruction Manual

INTRODUCTION

This manual provides comprehensive instructions for the installation, maintenance, and troubleshooting of your EPAuto CP134 (CF10134) Premium Cabin Air Filter. Designed to deliver clean air to the vehicle's cabin, this filter incorporates activated carbon to reduce odors and filter out dust, pollen, and other airborne irritants, thereby enhancing HVAC performance.

COMPATIBILITY

The EPAuto CP134 (CF10134) Premium Cabin Air Filter is compatible with a wide range of Acura and Honda vehicles. Please verify your vehicle's make, model, and year against the lists below.

Compatible Acura Models:

- CSX (2006-2011)
- ILX (2013-2022)
- MDX (2007-2020)
- RDX (2007-2018)
- RL (2005-2012)
- RLX (2014-2020)
- TL (2004-2014)
- TLX (2015-2020)
- TSX (2004-2014)
- ZDX (2010-2013)

Compatible Honda Models:

- Accord (2003-2022)
- Accord Crosstour (2010-2011)
- Civic (2006-2015)
- Crosstour (2012-2015)
- CR-V (2007-2016)
- Odyssey (2005-2017)
- Passport (2019-2025)
- Pilot (2009-2022)
- Ridgeline (2006-2025)

Compatible Model and Year List

• Acura:

FEATURES

- **Activated Carbon Layer:** Effectively absorbs odors and helps maintain a fresh cabin environment.

- **Multi-Layer Filtration:** Traps dust, pollen, road grime, and other harmful airborne contaminants.
- **Enhanced HVAC Performance:** Promotes optimal airflow through your vehicle's heating, ventilation, and air conditioning system.
- **Easy Installation:** Designed for straightforward replacement, often without specialized tools.

INSTALLATION GUIDE

Replacing your cabin air filter is a simple maintenance task that can significantly improve air quality inside your vehicle. The filter is typically located behind the glove compartment.

General Installation Steps:

1. **Locate the Glove Compartment:** The cabin air filter is usually accessed by opening or removing the glove compartment.
2. **Empty the Glove Compartment:** Remove all items from the glove compartment to facilitate access.
3. **Release the Glove Compartment:** Depending on your vehicle model, you may need to press tabs on the sides of the glove compartment or detach a dampener arm to allow it to swing down further.
4. **Locate the Filter Housing:** Behind the glove compartment, you will find a rectangular housing for the cabin

air filter. It often has clips or tabs to open it.

5. **Remove the Old Filter:** Carefully unclip the housing cover and slide out the old filter. Note the direction of the airflow arrow on the old filter.
6. **Clean the Housing:** Wipe away any debris or dust inside the filter housing before installing the new filter.
7. **Insert the New Filter:** Place the new EPAuto CP134 filter into the housing, ensuring the airflow arrow points in the correct direction (typically downwards or towards the rear of the vehicle, matching the old filter's orientation).
8. **Secure the Housing and Glove Compartment:** Close the filter housing cover, reattach any clips, and then re-install the glove compartment by reversing the removal steps.

Regular replacement of your cabin air filter is crucial for maintaining optimal air quality and HVAC system efficiency. It is recommended to replace the EPAuto CP134 (CF10134) Premium Cabin Air Filter every **12 months or 12,000 miles**, whichever comes first. However, in dusty environments or areas with high pollen counts, more frequent replacement may be necessary.

SPECIFICATIONS

Brand	EPAuto
Model	CP134 (CF10134)
Material	Carbon Fiber
Item Weight	9.5 ounces (268 Grams)
Product Dimensions	9.3 x 9 x 1.2 inches
Air Filter Construction	Pleated

TROUBLESHOOTING

- **Reduced Airflow:** If you experience reduced airflow from your HVAC system, it may indicate a clogged filter. Replace the filter as per the recommended maintenance schedule.
- **Unpleasant Odors:** Persistent odors in the cabin, even with the activated carbon filter, suggest the filter may be saturated or that the odor source is elsewhere in the HVAC system. Replace the filter and inspect the system if odors persist.
- **Increased Noise from HVAC:** A heavily clogged filter can strain the blower motor, leading to increased noise. Replacing the filter can alleviate this strain.
- **Improper Fit:** Ensure the filter is correctly seated in its housing and the airflow arrow is pointing in the right direction. An improper fit can lead to unfiltered air entering the cabin.

WARRANTY AND SUPPORT

EPAuto products are manufactured to high-quality standards. For any questions regarding product performance, installation, or warranty claims, please refer to the product packaging for specific warranty details or contact EPAuto customer support directly. Keep your purchase receipt as proof of purchase.
