If your system is running slowly, check for high CPU usage in Task Manager. This could indicate a virus or background processes consuming resources. Ensure your hard drive is not excessively full and consider running a disk defragmentation if using an HDD (not applicable for SSDs).

3. Unwanted Ads or System Changes

Unexpected pop-up ads, changes to your browser homepage, or icons directing to incorrect applications are strong indicators of malware. It is crucial to run a comprehensive antivirus scan immediately.
