De'Longhi Eco Decalk Mini

De'Longhi Eco Decalk Mini Descaler User Manual

Model: Eco Decalk Mini

Introduction

This manual provides instructions for the proper use and maintenance of De'Longhi Eco Decalk Mini descaler. Regular descaling is essential for maintaining the performance and longevity of your coffee machine.
De'Longhi Eco Decalk Mini is a natural descaling solution designed to effectively remove limescale deposits from coffee machines, ensuring optimal functionality and taste.

Safety Information

WARNING: Keep out of reach of children. Avoid contact with skin and eyes. In case of contact, rinse immediately with plenty of water and seek medical advice.
The descaler contains acids that can cause irritation. Always follow the instructions carefully and wear appropriate protective gear if necessary.

Setup and Preparation

1. **Consult your coffee machine's manual:** Before starting the descaling process, always refer to your specific coffee machine's instruction manual for detailed descaling procedures. Descaling steps can vary significantly between models.
2. **Empty the water tank:** Ensure the water tank of your coffee machine is completely empty.
3. **Remove accessories:** Remove any water filters, portafilters, or coffee grounds from the machine.
4. **Prepare the solution:** Pour one 100ml sachet of De'Longhi Eco Decalk Mini into the water tank.
5. **Dilute with water:** Fill the water tank with fresh water up to the descaling level indicated in your machine's manual, or typically to the maximum level.
6. **Place a container:** Position a large container (at least 1.5 liters capacity) under the coffee spout and steam wand to collect the descaling solution.

Operating Instructions (Descaling Process)

The general descaling process involves running the descaling solution through the machine, followed by rinsing cycles.

Always follow your machine's specific descaling program.

1. **Start descaling program:** Activate the descaling program on your coffee machine. This usually involves a specific button combination or menu selection.
2. **Run solution:** The machine will begin to dispense the descaling solution in intervals through the coffee spout and/or steam wand. Allow the entire solution to pass through.
3. **Rinse cycles:** Once the descaling solution is depleted, rinse the water tank thoroughly with fresh water. Refill the tank with clean water.
4. **Perform rinsing:** Run several full water tanks of clean water through the machine to thoroughly rinse out any remaining descaling solution. This is crucial to prevent any residual taste or chemical presence.
5. **Final check:** After the rinsing cycles are complete, your machine should be ready for use.

Maintenance and Frequency

Regular descaling is vital for the optimal performance and lifespan of your coffee machine. Limescale buildup can reduce heating efficiency, affect coffee taste, and potentially damage internal components.

- **Frequency:** The frequency of descaling depends on the hardness of your water and how often you use your machine. De'Longhi generally recommends descaling every 2-3 months, or when your machine indicates it's necessary (e.g., via a descaling light).
- **Water Hardness:** In areas with very hard water, more frequent descaling may be required.
- **Benefits:** Regular descaling helps maintain consistent coffee temperature, optimal flow rate, and prevents costly repairs.

Troubleshooting

Problem	Possible Cause	Solution
Descaling light remains on after process.	Descaling program not completed correctly or insufficient rinsing.	Repeat the descaling and rinsing cycles. Ensure the water tank is refilled for rinsing.
Coffee tastes unusual after descaling.	Residual descaling solution in the machine.	Perform additional rinsing cycles with fresh water until the taste is normal.
Machine not dispensing water during descaling.	Air bubble in the system or severe limescale blockage.	Refer to your machine's manual for air bubble removal. If blockage is severe, contact De'Longhi support.
