Titan Neo Analog Silver Dial Men's Watch User Manual

Model: NM1584SM03/NN1584SM03

INTRODUCTION

Thank you for choosing the Titan Neo Analog Silver Dial Men's Watch. This manual provides essential information for the proper setup, operation, and care of your timepiece. Please read these instructions carefully to ensure optimal performance and longevity of your watch.

SETUP

1. Setting the Time

1. Pull the crown (the small knob on the side of the watch case) out to the second click position.
2. Turn the crown clockwise or counter-clockwise to move the hands and set the desired time.
3. Once the time is set, push the crown back into its normal position.

2. Setting the Date

1. Pull the crown out to the first click position.
2. Turn the crown clockwise to adjust the date. Avoid setting the date between 9 PM and 3 AM, as this may interfere with the automatic date change mechanism.
3. Once the date is set, push the crown back into its normal position.

3. Adjusting the Bracelet

The metal bracelet can be adjusted by adding or removing links. This procedure typically requires specialized tools and should be performed by a qualified watch technician or jeweler to prevent damage to the watch or bracelet.

The Titan Neo watch comfortably worn on a wrist, demonstrating its fit and style.

OPERATING INSTRUCTIONS

Your Titan Neo watch is a quartz analog timepiece designed for reliable timekeeping. Once the time and date are set, the watch will operate continuously until the battery requires replacement.

- **Time Display:** The watch displays hours, minutes, and seconds via three central hands.

- **Date Display:** A date window is located on the dial, typically at the 3 o'clock position, showing the current day of the month.

MAINTENANCE

Cleaning Your Watch

To maintain the appearance of your watch, wipe the case and bracelet regularly with a soft, dry cloth. For stubborn dirt, a slightly damp cloth can be used, followed by a dry cloth. Avoid using chemical cleaners or abrasive materials.

Water Resistance

Your watch is water resistant up to 50 meters (165 feet). This means it is suitable for short periods of recreational swimming and showering. However, it is not suitable for diving or snorkeling. Always ensure the crown is fully pushed in before any contact with water.

Battery Replacement

The watch is powered by a single A battery. When the watch stops running, it indicates the battery needs replacement. Battery replacement should be performed by a qualified watch technician to ensure proper sealing and maintain water resistance.

Rear view of the watch, showing the stainless steel back and water resistance marking.

TROUBLESHOOTING

- **Watch Not Running:** If the watch stops, the battery may need to be replaced. Consult a professional watch technician.
- **Date Not Changing:** Ensure the time is set correctly, passing 12 AM for the date to advance. If the issue persists, the date mechanism may require inspection by a technician.
- **Condensation Inside the Crystal:** This can indicate a loss of water resistance. Have the watch inspected and sealed by a professional immediately to prevent further damage.
