## 4. SETUP AND INSTALLATION

---

### 4.1 Mounting Location

Choose a suitable location for the thermostat, typically on an interior wall, away from direct sunlight, drafts, and heat sources (e.g., radiators, lamps). The recommended height is approximately 1.5 meters (5 feet) from the floor.

### 4.2 Wiring Instructions

1. **Disconnect Power:** Turn off the main power supply to the heating system at the circuit breaker before beginning any wiring.
2. **Remove Cover:** Carefully remove the front cover of the thermostat.
3. **Connect Wires:** Connect the 230V power supply and heating system control wires to the designated terminals. Refer to the wiring diagram provided with the product packaging for specific terminal assignments. Ensure all connections are secure.
4. **Secure Thermostat:** Mount the thermostat base to the wall using the provided screws.
5. **Replace Cover:** Reattach the front cover.
6. **Restore Power:** Turn the main power supply back on.

## 5. OPERATING INSTRUCTIONS

---

### 5.1 Setting the Desired Temperature

The thermostat typically features a rotary dial or up/down buttons to adjust the setpoint temperature. Rotate

the dial or press the buttons to select your desired room temperature. The thermostat will then work to maintain this temperature.

5.2 Indicator Lights (if applicable)

Some models may include an indicator light to show when the heating system is active. Consult your specific model's diagram for details.

6. MAINTENANCE

6.1 Cleaning

Wipe the thermostat's exterior with a soft, dry cloth. Do not use abrasive cleaners or solvents, as these can damage the surface.

6.2 Battery Replacement (if applicable)

This wired thermostat does not require batteries for its primary function. If your specific model has a backup battery for settings, refer to the product packaging for replacement instructions.

7. TROUBLESHOOTING

Problem	Possible Cause	Solution
Thermostat not powering on	No power supply; incorrect wiring.	Check circuit breaker; verify wiring connections.
Heating system not responding	Thermostat set too low; wiring issue; heating system fault.	Increase setpoint temperature; check wiring; consult heating system manual.
Inaccurate temperature reading	Thermostat located near heat source/draft; sensor malfunction.	Relocate thermostat if possible; contact support if sensor is faulty.
