- **Heat Exchanger Cleaning:** Periodically inspect and clean the heat exchanger to remove any dust or debris buildup. This helps maintain heat recovery efficiency.
- **Condensate Drain Inspection:** Ensure the condensate drain line is clear and free of blockages. Clean if necessary to prevent water accumulation.
- **External Cleaning:** Wipe down the exterior of the unit with a soft, damp cloth. Do not use abrasive cleaners or solvents.
- **Professional Inspection:** It is recommended to have the unit professionally inspected and serviced by a qualified technician at least once every 1-2 years.
