## 5. Operating Instructions

Your Gorilla Carts Steel Utility Wagon is designed for efficient material transport. Follow these guidelines for optimal performance:

- **Loading Capacity:** Do not exceed the maximum load capacity of 1000 pounds. Distribute weight evenly across the bed to maintain stability and prevent tipping.
- **Manual Operation:** For manual pulling, ensure the handle is locked in the upright position. The padded grip provides comfort during transport.
- **Towing Operation:** To tow behind a lawnmower or ATV, convert the handle to the towing hitch position. Securely attach the hitch to your vehicle's tow point.
- **Flatbed Conversion:** For oversized items, the mesh side panels can be easily removed by pulling out the retaining pins. This transforms the wagon into a flatbed. Reattach panels when full enclosure is needed.
- **Terrain:** The pneumatic tires are designed for all-terrain use, providing smooth maneuverability over various surfaces including grass, gravel, and uneven ground.

## 6. Maintenance

Regular maintenance ensures the longevity and optimal performance of your utility wagon:

- **Tire Pressure:** Periodically check and maintain the recommended air pressure in the pneumatic tires. Under-inflated tires can affect maneuverability and load capacity.
- **Cleaning:** Clean the steel mesh bed and frame after each use, especially when hauling dirt, mud, or corrosive materials, to prevent rust and buildup.
- **Fasteners:** Regularly inspect all nuts, bolts, and pins for tightness. Tighten any loose fasteners to ensure structural integrity and safety.
- **Storage:** Store the wagon in a dry, covered area when not in use to protect it from the elements and extend its lifespan.

## 7. Troubleshooting

Below are common issues and their potential solutions:

- **Difficulty Maneuvering:**
  - Check tire pressure; ensure all tires are properly inflated.
  - Verify load distribution; redistribute weight evenly.
  - Inspect for bent axles or damaged wheels.
- **Wagon Feels Unstable:**
  - Ensure all side panels are securely latched.
  - Check all frame connections for tightness.
  - Do not exceed the maximum weight capacity.
- **Excessive Noise During Operation:**
  - Inspect wheels and axles for debris or damage.
  - Lubricate moving parts as needed.
