5.1 Key Features and Functions

- **Broadband Access & High-Speed Ethernet:** Configures the router for optimal performance with various broadband services, supporting high-speed data transfer.
- **Load Balancing & Failover (BGP):** Manages multiple Internet connections to distribute traffic efficiently and ensure continuous connectivity in case one link fails.
- **Multi-T1 Internet Access:** Supports connections requiring up to eight T1 lines for enhanced WAN access and corporate connectivity.
- **Power over Ethernet (PoE):** Provides power to compatible devices (e.g., IP phones, wireless access points) directly through Ethernet cables, simplifying deployment.
- **Quality of Service (QoS) for VoIP:** Prioritizes voice and video traffic to ensure clear, uninterrupted communication over IP networks.
- **Secure Internet Access (Firewall/NAT):** Implements firewall rules and Network Address Translation (NAT) to protect your network from external threats and manage IP addresses.
