

GP AA NiMH 2100mAh Recyko

GP 16 AA NiMH Pre-Charged 1.2V 2100mAh Recyko Rechargeable Batteries User Manual

Model: AA NiMH 2100mAh Recyko

INTRODUCTION

GP Recyko AA NiMH Rechargeable Batteries are designed for reliable and long-lasting power in various electronic devices. These pre-charged batteries offer convenience and can be recharged multiple times, reducing waste and providing a cost-effective power solution. This manual provides essential information for the safe and effective use of your GP Recyko batteries.

Image: Four individual blister packs, each containing four GP ReCyko+ AA rechargeable batteries. The batteries are green and silver, labeled with 'GP ReCyko+' and 'AA 2100mAh'. The packaging highlights their rechargeable nature and 'Lasts Longer' feature.

SETUP

- 1. Initial Charge:** Your GP Recyko AA NiMH batteries are pre-charged and ready for immediate use. For optimal performance and longevity, it is recommended to fully charge them before the first use, and after each subsequent discharge.

2. **Battery Insertion:** Ensure correct polarity (+ and -) when inserting batteries into your device. Incorrect insertion can damage both the battery and the device. Refer to your device's instruction manual for specific battery compartment details.

OPERATING INSTRUCTIONS

- **Device Compatibility:** These batteries are suitable for a wide range of electronic devices that require AA batteries, such as cameras, remote controls, toys, and portable audio players. Always refer to your device's manual for specific battery requirements and compatibility.
- **Charging Process:** To recharge, use a compatible NiMH battery charger. Follow the charger's instructions for safe and effective charging. Avoid mixing different types or brands of batteries in the same charger or device.
- **Discharge:** For best results, allow batteries to fully discharge before recharging, especially during the initial cycles, to help maintain battery health.

MAINTENANCE

- **Storage:** Store batteries in a cool, dry place away from direct sunlight and extreme temperatures. Avoid storing fully discharged batteries for extended periods, as this can reduce their lifespan.
- **Cleaning:** Keep battery terminals clean. If necessary, gently wipe them with a dry cloth to ensure good electrical contact.
- **Disposal:** Do not dispose of batteries in household waste. Recycle them at designated collection points according to local regulations.

TROUBLESHOOTING

- **Batteries Not Holding Charge:** Ensure your charger is functioning correctly and that the batteries are properly seated. Over time, all rechargeable batteries experience a decrease in capacity; if performance significantly degrades, replacement may be necessary.
- **Device Not Powering On:** Check battery insertion for correct polarity, ensure batteries are fully charged, and verify the device itself is operational with other known-good batteries.
- **Overheating During Charge:** If batteries become excessively hot during charging, immediately remove them from the charger and discontinue use. This may indicate a faulty battery or charger.

SPECIFICATIONS

Feature	Detail
Brand	GP
Model	AA NiMH Recyko
Battery Type	NiMH (Nickel-Metal Hydride)
Voltage	1.2V
Capacity	2100 mAh
Recharge Cycles	Up to 1000 times
Pre-Charged	Yes

Feature	Detail
Quantity	16 AA batteries
Recommended Uses	Camera, Clock

WARRANTY AND SUPPORT

For specific warranty information regarding your GP Recyko batteries, please refer to the packaging or contact the retailer or manufacturer directly. Warranty terms typically cover manufacturing defects.

For technical support or further inquiries, please contact GP customer service through their official website or the contact information provided on the product packaging.
