Please verify your refrigerator's existing filter model number to ensure compatibility before installation.

Installation (Setup)

Follow these steps to install your new Denali Pure Refrigerator Air Filter:

1. **Step 1: Locate the Filter Compartment**

   Refer to your refrigerator's owner's manual to locate the air filter compartment. This is typically found inside the fresh food section, often near the top or rear wall.

2. **Step 2: Remove the Old Filter**

   Open the filter compartment cover. Depending on your refrigerator model, you may need to press a tab, twist, or pull to release the old filter. Carefully remove the used filter and dispose of it properly.

3. **Step 3: Install the New Filter**

   Unpack the new Denali Pure air filter. Insert the new filter into the compartment, ensuring it is oriented correctly. The filter should slide in smoothly and click into place if applicable. Close the filter compartment cover securely.

4. **Step 4: Reset the Filter Indicator (if applicable)**

   Some refrigerators have a filter change indicator light. Consult your refrigerator's manual for instructions on how to reset this indicator after installing a new air filter. This usually involves pressing and holding a specific button for a few seconds.

Maintenance

To ensure optimal performance and air quality, regular maintenance of your air filter is essential:

- **Replacement Frequency:** It is recommended to replace the refrigerator air filter every 6 months.
- **Signs of a Clogged Filter:** If you notice persistent odors in your refrigerator, it may be an indication that the air filter needs to be replaced sooner.
