4. Setup and Installation

Installation of the Denali Pure Refrigerator Air Filter is typically straightforward. Refer to your refrigerator's owner's manual for the exact location of the air filter compartment, as it can vary by model.

General Installation Steps:

1. **Locate the Filter Compartment:** The air filter is usually located on the back wall of the refrigerator, often near the top or in a dedicated compartment.
2. **Open the Compartment:** Depending on your refrigerator model, you may need to press a tab, slide a cover, or twist a cap to open the filter housing.
3. **Remove the Old Filter:** Carefully pull out the old air filter. Note its orientation for correct installation of the new filter.
4. **Install the New Filter:** Insert the Denali Pure air filter into the compartment, ensuring it is oriented correctly (e.g., "FRONT" or "AIR FLOW" indicators, if present, should face outwards or in the direction of airflow). The filter should click into place or fit snugly.
5. **Close the Compartment:** Securely close the filter housing cover.
6. **Reset Filter Indicator (if applicable):** Many refrigerators have a filter indicator light. Consult your refrigerator's manual for instructions on how to reset this light after replacing the filter. This often involves pressing and holding a

specific button for a few seconds.

5. Operating Instructions

The Denali Pure Refrigerator Air Filter operates passively once installed. It continuously filters the air circulating within your refrigerator to remove odors. No active user intervention is required for its operation.

- Ensure the filter compartment is properly closed after installation to allow for optimal air circulation through the filter.
- The filter works best when the refrigerator door is not left open for extended periods, as this introduces new odors and humidity.

6. Maintenance

Regular replacement of your refrigerator air filter is crucial for maintaining its effectiveness and ensuring a fresh environment inside your appliance.

Filter Replacement Schedule:

It is recommended to replace the Denali Pure Refrigerator Air Filter approximately every 6 months, or sooner if you notice persistent odors in your refrigerator. Some refrigerators have an indicator light that signals when a replacement is due.

Disposal:

Dispose of the used filter according to your local waste disposal guidelines. The filter material is typically non-hazardous.

7. Troubleshooting

Problem	Possible Cause	Solution
Refrigerator still has odors after filter installation.	Filter not installed correctly. Old food items causing odors. Filter needs replacement (if it's an older filter). Strong, persistent odors requiring more than just the filter.	Ensure the filter is securely seated in its compartment. Remove any spoiled or strong-smelling food items. Clean spills. Replace the filter if it has been in use for more than 6 months. Consider using baking soda or activated charcoal alongside the filter for severe odors.
Filter indicator light remains on after replacement.	Indicator not reset.	Refer to your refrigerator's owner's manual for specific instructions on how to reset the air filter indicator light. This usually involves pressing and holding a button on the control panel.
