Electro-Harmonix MEL9 Tape Replay Machine Pedal User Manual

Model: MEL9

INTRODUCTION

The Electro-Harmonix MEL9 Tape Replay Machine Pedal is designed to transform your instrument's sound, replicating the distinctive tones of vintage tape-based keyboards. Utilizing advanced polyphonic technology, the MEL9 offers nine classic Mellotron-inspired sounds, allowing guitarists, bassists, and keyboardists to access a unique sonic palette without modifications to their instruments.

Key features of the MEL9 include:

- Works with guitar without requiring special pickups or MIDI implementation, accurately tracking bends, slides, and whammy dive bombs.
- Compatible with bass guitar down to the open A string, and keyboards within its polyphony (5 notes) and range (A1 to A5).
- Independent Effect and Dry volume controls enable precise mixing of the processed and unprocessed signals.
- A dedicated Dry Output jack provides the input signal at unity gain.
- The Sustain control adjusts the release time of the effect, increasing fade-out time as it is turned clockwise.

GETTING STARTED

Package Contents

- Electro-Harmonix MEL9 Tape Replay Machine Pedal
- Power adapter

Power Supply

The MEL9 requires a 9V DC power supply with a center-negative plug. The pedal operates on 9 volts and requires approximately 100mA of current. Ensure the correct power adapter is used to prevent damage to the unit.

Connections

Connect your instrument to the **INPUT** jack on the right side of the pedal. Connect the **EFFECT OUTPUT** jack to your amplifier or next effect pedal for the processed signal. The **DRY OUTPUT** jack provides your original, unprocessed instrument signal at unity gain, which can be routed to a separate amplifier or signal chain if desired.

CONTROLS AND FUNCTIONS

Image: A detailed view of the MEL9's control knobs and the 9-position preset selector.

DRY VOL Knob: This control adjusts the output volume of your original, unprocessed instrument signal. It is active for both the EFFECT OUTPUT and DRY OUTPUT jacks.

EFFECT VOL Knob: This control adjusts the output volume of the MEL9's processed effect sound. It is active only for the EFFECT OUTPUT jack.

ATTACK Knob: The ATTACK knob controls the fade-in speed of the effect sound. Turning it clockwise increases the time it takes for the effect to reach full volume, creating a softer, more gradual swell. Turning it counter-clockwise results in a faster, more immediate attack.

SUSTAIN Knob: The SUSTAIN knob adjusts the decay time of the effect sound after the input signal stops. Turning it clockwise increases the length of the sustain, allowing the effect to ring out longer. Turning it counter-clockwise shortens the decay.

PRESET Knob: This 9-position rotary switch selects one of the nine distinct Mellotron-inspired instrument sounds.

FOOTSWITCH: This footswitch engages or bypasses the MEL9 effect. When the effect is engaged, the status LED illuminates.

Preset Descriptions

1. **ORCHESTRA:** A rich, full orchestral sound, combining multiple string and brass elements.
2. **CELLO:** Emulates the deep, resonant tone of a cello.
3. **STRINGS:** A classic Mellotron string section sound, ideal for pads and melodic lines.
4. **FLUTE:** Recreates the airy, breathy sound of a flute.
5. **CLARINET:** Provides the distinct, reedy tone of a clarinet.
6. **SAXOPHONE:** A vintage saxophone sound, suitable for lead melodies or harmonies.
7. **BRASS:** A powerful brass section sound.
8. **LOW CHOIR:** A deep, ethereal male choir sound.
9. **HIGH CHOIR:** A bright, angelic female choir sound.

OPERATION

To begin using your MEL9, ensure it is properly powered and connected as described in the 'Getting Started' section. Start with the DRY VOL and EFFECT VOL knobs at the 12 o'clock position. Select a preset using the PRESET knob. Engage the footswitch to activate the effect.

Experiment with the DRY VOL and EFFECT VOL knobs to find the desired blend between your original instrument sound and the MEL9 effect. Adjust the ATTACK and SUSTAIN knobs to shape the envelope of the effect, creating anything from quick, percussive sounds to long, evolving pads.

The MEL9 is polyphonic, meaning it can process multiple notes simultaneously. For optimal tracking, ensure clean playing technique. For guitarists, using a compressor pedal before the MEL9 can help even out the signal and improve tracking consistency, especially for chords.

MAINTENANCE

The Electro-Harmonix MEL9 pedal is a robust electronic device designed for reliable performance. To ensure its longevity and optimal function, follow these general maintenance guidelines:

- **Cleaning:** Use a soft, dry cloth to clean the pedal's exterior. Avoid abrasive cleaners or solvents, which can damage the finish or internal components.
- **Storage:** Store the pedal in a cool, dry place away from direct sunlight, extreme temperatures, and high humidity.
- **Power:** Always use the specified 9V DC center-negative power adapter. Disconnect power when the pedal is not in use for extended periods.
- **Connections:** Periodically check all cables and jacks for wear or damage. Ensure connections are secure.
- **Avoid Impact:** Protect the pedal from drops or heavy impacts, which can damage internal circuitry or external controls.

TROUBLESHOOTING

If you encounter issues with your MEL9 pedal, consider the following troubleshooting steps:

- **No Sound or Weak Effect:**

- Verify the power adapter is correctly connected and supplying power.
- Check all instrument cables for proper connection and integrity. Try swapping cables.
- Ensure the DRY VOL and EFFECT VOL knobs are not set to minimum.
- Confirm the footswitch is engaged (status LED illuminated).
- Test the pedal in a simpler signal chain (e.g., instrument directly into MEL9, then directly to amplifier).

- **Unwanted Noise or Hum:**

- Ensure you are using a regulated, isolated power supply. Daisy-chaining power with other pedals can sometimes introduce noise.
- Check for ground loops in your setup.
- Try moving the pedal away from other electronic devices that might cause interference.

- **Poor Tracking or Glitching:**

- Ensure your instrument's output is strong and clear. Weak signals can affect tracking.
- Consider placing a compressor pedal before the MEL9 to provide a more consistent input signal, especially for guitar.
- Playing technique can influence tracking. Try to play cleanly and avoid excessive string noise.

If problems persist after these steps, please refer to the support information below.

The polyphonic STRING9 String Ensemble transforms a guitar into nine different string ensembles and string synthesizers while requiring no modifications, special pickups, or MIDI implementation. It relies on the same technology powering all EHX 9-Series pedals. In a 9-Series first, the STRING9 includes the signature EHX Freeze effect on 8 of the presets to sample and hold notes and chords with infinite sustain.

A rotary switch on the STRING9 allows the player to select the sound of their choice, as follows:

SYMPHONIC: Creates the sound of a large symphony orchestra and features an octave down effect on the lower range of the guitar for a full sound.
JEANIE-O: Simulates the jangle of an analog string synthesizer.
PCM: Sound of a small string section sampled by a vintage PCM keyboard producing a warm vintage string sound.
FLOPPY: Emulates the sound of an Orchestron® optical disc playback sampler, usable included.
ARND: Emulates the classic ARP Solusynth analog string and brass synthesizer. Played in a box.
ORCHESTRA: Orchestral sound with EHX Freeze effect.
SYNTH FREEZE: String synthesizer sound with EHX Freeze effect.
VOX FREEZE: Mellotron® choir and strings sound from the EHX MEL9 with EHX Freeze effect.

Download User Settings Sheet

The pedal is equipped with independent Effect and Dry volume controls to players can precisely tune their mix at the Effects output jack, plus a Dry output jack that always outputs the input signal at unity gain.

Controls 1 and 2 have been designed to adjust specific parameters for each of the nine programs adding usability and flexibility to each sound.

Simulates nine string ensemble and string synthesizer sounds.
Tracks impeccably and works on guitar without needs, special pickups or MIDI implementation.
Independent Effect and Dry volume knobs let you precisely control your mix at the Effects output.
Controls 1 and 2 have been designed to adjust specific parameters for each of the nine programs.
Dry output jack outputs the input signal at unity gain.
Compact - rugged, easy to use.
