6. Cleaning and Maintenance

Regular cleaning helps maintain the performance and appearance of your kettle.

6.1. Exterior Cleaning

- Always unplug the kettle and allow it to cool completely before cleaning.
- Wipe the exterior with a soft, damp cloth. Do not use abrasive cleaners or scouring pads, as they may scratch the surface.
- Never immerse the kettle body or power base in water or any other liquid.

6.2. Interior Cleaning and Descaling

Over time, mineral deposits (limescale) may build up inside the kettle, especially in hard water areas. This can affect performance and taste.

- **Descaling Solution:** You can use a commercial descaling solution specifically designed for kettles, following the product's instructions.
- **Natural Descaling:** Alternatively, fill the kettle with a mixture of one part white vinegar and two parts water. Boil the mixture and let it stand for at least 30 minutes, or longer for heavy scale.
- **Rinse:** After descaling, empty the kettle and rinse it thoroughly several times with fresh water to remove any residue

and vinegar smell.

- **Filter Cleaning:** The removable filter can be detached and rinsed under running water. For stubborn deposits, gently brush it with a soft brush. Ensure it is properly re-inserted before use.
