## 3. SETUP AND INSTALLATION

### Unpacking

Carefully remove all packaging materials, including tape and protective films. Dispose of packaging responsibly. Inspect the refrigerator for any shipping damage.

## Placement

Position the refrigerator on a level, stable surface away from direct sunlight and heat sources. Ensure adequate clearance around the appliance for proper ventilation. Recommended clearances are typically 2 inches at the back and 1 inch on the sides and top.

## Leveling

Use the adjustable leveling feet at the bottom of the refrigerator to ensure it is level. A level appliance prevents door misalignment and ensures efficient operation.

## Water Line Connection

The refrigerator requires a cold water supply for the ice maker and water dispenser. Connect the appliance to a potable water supply using a water line kit (not included). Ensure all connections are secure and leak-free. It is recommended to flush the water system before first use.

## Electrical Connection

Connect the refrigerator to a dedicated, grounded 120 Volt, 60 Hz AC outlet. Do not use extension cords or adapter plugs. Ensure the electrical circuit is protected by a fuse or circuit breaker.

## Initial Startup

After connecting power, allow the refrigerator to cool for several hours before loading food. The ice maker will begin producing ice within 24 hours, but it may take up to 72 hours for full ice production.

## 4. OPERATING INSTRUCTIONS

## Control Panel

The electronic control panel, typically located at the top of the fresh food compartment, allows you to adjust temperature settings and activate special features.

## Temperature Adjustment

Use the control panel to set the desired temperature for the refrigerator and freezer compartments. Recommended settings are usually 37°F (3°C) for the refrigerator and 0°F (-18°C) for the freezer.

## Ice Maker Operation

The automatic ice maker will produce ice cubes once the water supply is connected and the freezer reaches the correct temperature. The ice bucket is located in the freezer drawer. Discard the first few batches of ice to ensure cleanliness.

## Water Dispenser Operation

To dispense water, place a glass under the dispenser nozzle and press the dispenser lever. Ensure the water supply is connected and the system has been flushed.
