TROUBLESHOOTING

If you encounter issues with your Ezcap USB 2.0 Audio/Video Converter, refer to the following common problems and solutions:

- **No Video Signal:**
 - Ensure all cables (USB, video, audio) are securely connected.
 - Verify that the analog source (VCR, DVD player) is powered on and playing content.
 - Check that the correct input source (Composite or S-Video) is selected in the capture software.
 - Confirm that the Ezcap device is selected as the video input device in your software settings.
- **No Audio or Poor Audio Quality:**
 - Ensure the red and white RCA audio cables are correctly connected to both the source and the converter.
 - Check audio settings in the capture software to ensure the Ezcap device is selected as the audio input.
 - Adjust volume levels on both the analog source and within the capture software.
 - If audio is choppy or clips, try reducing the input volume from the source or checking for updated drivers.
- **Software Issues (e.g., activation codes, outdated software):**
 - If prompted for an activation code, refer to the software packaging or contact the software developer's support.
 - The included software may be basic or outdated. Consider searching for alternative, compatible video capture software online if you experience significant limitations or compatibility issues with newer Windows versions.
 - Ensure your operating system is fully updated.
- **Video Aspect Ratio Incorrect:**
 - Some older capture software may not fully support widescreen (16:9) aspect ratios. Check software settings for aspect ratio options. If unavailable, post-capture editing may be required.
