2. Connecting Earphones

To listen privately, plug the included earphones into the 3.5mm auxiliary jack located on the side of the radio. Inserting earphones will automatically mute the built-in speaker.

3. Antenna Adjustment

For optimal AM/FM reception, extend the telescopic antenna fully. For AM reception, rotating the radio itself may also improve signal quality. For FM, adjusting the angle and length of the antenna is recommended.

4. Using the Belt Clip

The integrated belt clip on the back of the radio allows for convenient attachment to a belt, pocket, or strap, making the radio easy to carry while on the go.

OPERATING INSTRUCTIONS

1. Power On/Off

Locate the power switch, typically combined with the volume control. Rotate the dial clockwise to turn the radio on and increase volume. Rotate counter-clockwise until a click is heard to turn the radio off.

2. Band Selection (AM/FM)

Use the AM/FM band selector switch, usually located on the side or top of the radio, to choose between Amplitude Modulation (AM) and Frequency Modulation (FM) bands.

3. Tuning to a Station

Once the desired band is selected, slowly rotate the tuning dial to scan through available frequencies. The frequency scale on the front of the radio will indicate the current tuning position. Stop when you hear a clear broadcast.

4. Volume Control

Adjust the volume by rotating the volume dial (often integrated with the power switch) to your preferred listening level.

MAINTENANCE

1. Cleaning

- Wipe the radio's exterior with a soft, dry cloth.
- Do not use liquid cleaners, abrasive pads, or chemical solvents, as these can damage the finish or internal components.

2. Battery Care

- Replace batteries when the sound becomes weak or distorted.
- Remove batteries if the radio will not be used for an extended period to prevent leakage and damage.

3. Storage

Store the radio in a cool, dry place away from direct sunlight, extreme temperatures, and high humidity. Avoid dropping or subjecting the radio to strong impacts.

TROUBLESHOOTING

Common Issues and Solutions

- **No Power:**

Check if the batteries are inserted correctly with the right polarity. Ensure the batteries are fresh and not depleted.

- **Poor Reception:**

Fully extend the telescopic antenna. Try repositioning the radio or rotating it for better signal. For AM, environmental factors can significantly affect reception.

- **No Sound:**

Ensure the volume is turned up. If earphones are plugged in, check if they are fully inserted and functional. If using the speaker, ensure earphones are unplugged.
