

Steinbach 040385

Steinbach Classic 250N Filtration System

INSTRUCTION MANUAL

1. Product Overview

The Steinbach Classic 250N Filtration System is a high-performance sand filter designed to maintain clean and clear water in above-ground pools. This powerful unit is suitable for pools with a capacity of up to 19,000 liters, ensuring efficient removal of impurities. It features a robust pump and a versatile 7-way valve for various operational modes.

Figure 1: The Steinbach Classic 250N Filtration System, showing the filter tank, pump, and multi-port valve.

2. Safety Information

Please read all safety instructions carefully before installation and operation to prevent injury or damage. Keep this manual for future reference.

- Always disconnect the power supply before performing any maintenance or cleaning on the filter system.
- Ensure the electrical outlet is protected by a Ground Fault Circuit Interrupter (GFCI) for safety.
- Do not operate the pump if the water temperature exceeds 35°C (95°F).
- Keep children away from the filter system during operation.
- Ensure all connections are secure and leak-free to prevent water damage or electrical hazards.
- The pump is not self-priming; ensure it is filled with water before starting.

3. Setup and Installation

Proper installation is crucial for the optimal performance of your filtration system. Follow these steps carefully:

3.1 Unpacking and Component Check

Verify that all components are present and undamaged:

- Filter Tank (250 mm diameter)
- Pump Unit (230V / 200W)
- 7-Way Multi-Port Valve with Pressure Gauge
- Connecting Hoses (32/38 mm diameter)
- Base Plate
- Clamps and Fittings

3.2 Filter Media Preparation

The system requires approximately 10 kg of filter sand with a granule size of 0.7 - 1.2 mm, or compatible filter balls. Refer to the specific instructions for filling the filter tank with your chosen media.

3.3 Assembly and Connection

1. Place the base plate on a firm, level surface near your pool.
2. Mount the filter tank and pump securely onto the base plate.
3. Connect the pump to the filter tank and the multi-port valve using the provided hoses and fittings. Ensure all connections are tight to prevent leaks.
4. Connect the system to your pool's skimmer and return lines using 32/38 mm hoses.

Figure 2: The 7-way multi-port valve, indicating its various functions for pool maintenance.

Figure 3: The pump unit, which circulates water through the filter system.

Figure 4: Product label displaying key technical data for the pump.

3.4 Optimal Placement

For gravity-fed operation, the water level in the pool should be above the sand filter. Avoid situations where the water level is below the filter, as this can hinder proper flow and operation.

Wie kann man diese Sandfilteranlage einsetzen?

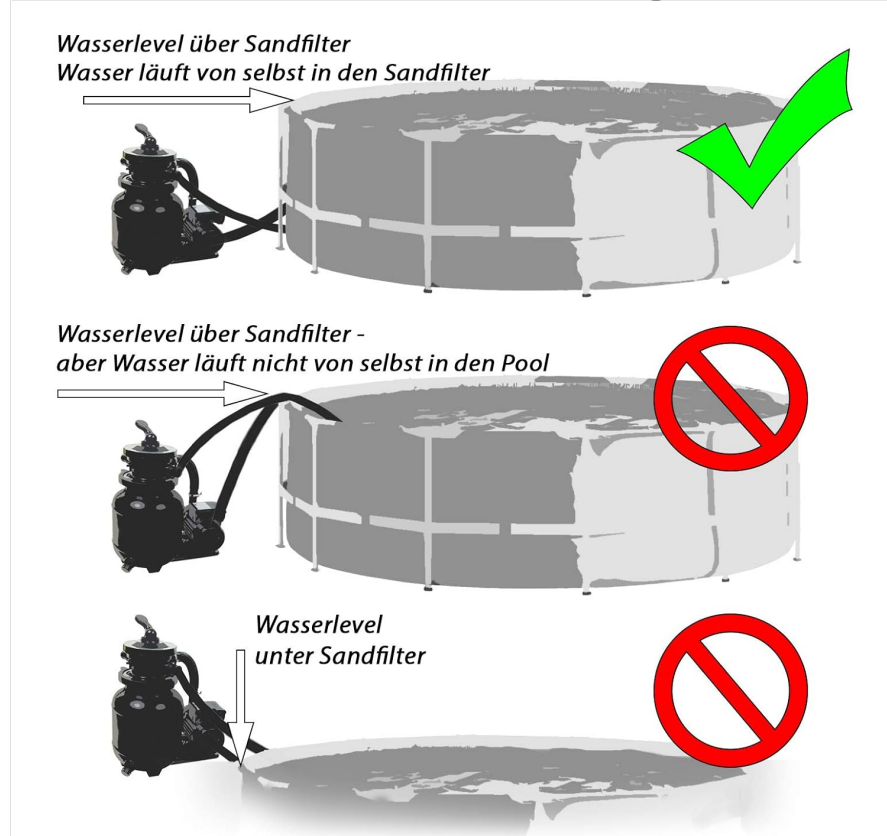

Figure 5: Illustration of correct (top) and incorrect (middle, bottom) placement of the sand filter relative to the pool's water level for optimal gravity flow.

4. Operating Instructions

The 7-way multi-port valve allows for different operational modes. Always turn off the pump before changing the valve position.

- **FILTER:** This is the standard operating mode for daily filtration. Water is pumped through the filter media, and clean water is returned to the pool.
- **BACKWASH:** Used to clean the filter media. Water flows in reverse through the filter, dislodging trapped debris, which is then discharged to waste. Perform when pressure gauge indicates high pressure.
- **RINSE:** Used after backwashing to flush out any remaining debris from the filter media and lines before returning to FILTER mode. Water is discharged to waste.

- **WASTE (EMPTY):** Bypasses the filter and pumps water directly out of the pool to waste. Useful for lowering pool water level or vacuuming heavy debris directly to waste.
- **RECIRCULATE (CIRCULATE):** Bypasses the filter and circulates water directly back to the pool. Useful for distributing chemicals without filtering.
- **CLOSED:** Closes all flow to the filter. Use only when the pump is off and for maintenance tasks that require isolating the filter.

To start operation, ensure the valve is set to FILTER, then turn on the pump. Monitor the pressure gauge for normal operating pressure.

5. Maintenance

Regular maintenance ensures the longevity and efficiency of your Steinbach filtration system.

5.1 Backwashing and Rinsing

Perform backwashing when the pressure gauge reading is 0.2-0.3 bar (3-5 psi) above the clean filter pressure, or when water flow to the pool decreases significantly. Follow with a rinse cycle.

1. Turn off the pump.
2. Set the valve to BACKWASH.
3. Turn on the pump and backwash until the water in the sight glass (if present) runs clear (typically 2-3 minutes).
4. Turn off the pump.
5. Set the valve to RINSE.
6. Turn on the pump and rinse for 30-60 seconds.
7. Turn off the pump.
8. Set the valve back to FILTER.
9. Turn on the pump to resume normal filtration.

5.2 Filter Media Replacement

Filter sand typically needs replacement every 3-5 years, depending on usage and water quality. Filter balls may require periodic cleaning or replacement as per their specific instructions.

5.3 Winterization

Before freezing temperatures, drain all water from the pump, filter tank, and hoses. Store the pump and valve in a dry, frost-free location. Cover the filter tank if it remains outdoors.

6. Troubleshooting

Refer to this section for common issues and their potential solutions.

Problem	Possible Cause	Solution
Low water flow / Poor filtration	Clogged filter media; Clogged skimmer/pump basket; Air in system; Incorrect valve setting.	Perform backwash/rinse; Clean skimmer/pump basket; Bleed air from system; Set valve to FILTER.
High pressure gauge reading	Dirty filter media.	Perform backwash and rinse cycle.
Water leaking from valve/connections	Loose connections; Damaged O-rings/gaskets.	Tighten connections; Inspect and replace O-rings/gaskets if necessary.
Pump not priming	Pump not filled with water; Air leak on suction side; Clogged impeller.	Fill pump with water; Check all suction side connections for leaks; Inspect and clear impeller.

7. Technical Specifications

Feature	Specification
Model Number	040385
Brand	Steinbach
Max Pool Volume	Up to 19,000 liters
Circulation Capacity	4,170 liters/hour
Pumping Capacity	6,000 liters/hour (non-self-priming)
Voltage	230 V
Power	200 W

Feature	Specification
Max Water Temperature	35 °C
Boiler Diameter	250 mm
Connection Diameter	32/38 mm
Recommended Sand Quantity	Approx. 10 kg
Recommended Granule Size	0.7 - 1.2 mm
Product Dimensions (L x W x H)	43 x 27 x 58 cm
Product Weight	8.5 kg

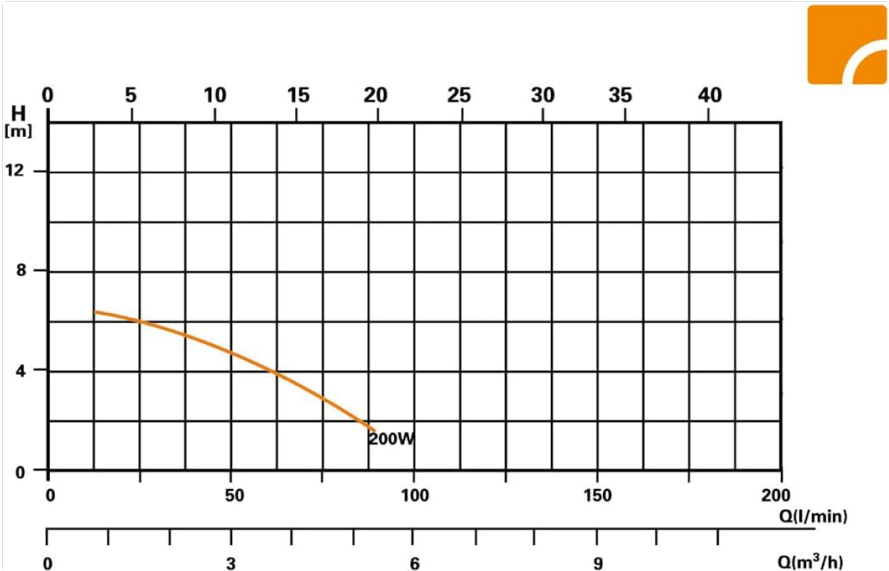

Figure 6: Pump performance curve, illustrating flow rate (Q) versus head (H) for the 200W pump.

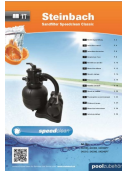

8. Warranty and Support

For specific warranty details and terms, please refer to the documentation provided with your purchase. In general, products purchased through Amazon may be eligible for returns or replacements within 30 days, subject to Amazon's return policy.

For technical support, spare parts, or further assistance, please contact Steinbach customer service. Contact information can typically be found on the manufacturer's website or on the product packaging.
