## Setup

---

The ARREGUI Keeper features a 4-digit resettable combination lock. Follow these steps to set your personal combination code:

1. **Initial State:** The lock is factory set to 0-0-0-0. Ensure the dials are set to this combination.
2. **Open the Shackle:** With the correct combination aligned, pull up the shackle to open the lock box.
3. **Locate the Reset Lever:** Inside the shackle mechanism, locate the small reset lever or button. This is typically on the side or bottom of the shackle base.
4. **Rotate/Push the Reset Lever:** Using a small pointed object (like a pen tip), push or rotate the reset lever to the "SET" position (usually a 90-degree turn or a push inward). Refer to the diagram below for typical reset lever location.
5. **Set Your New Combination:** While the reset lever is in the "SET" position, rotate the dials to your desired 4-digit combination. Choose a memorable but secure code.

6. **Return the Reset Lever:** Return the reset lever to its original "LOCK" position. This will lock in your new combination.
7. **Test the New Combination:** Scramble the dials and then re-enter your new combination to ensure it opens the lock. If it does not open, repeat the steps carefully.

**Important: Do not forget your combination. There is no master key or override for this lock. If the combination is forgotten, the box cannot be opened without destructive means.**

## Operating Instructions

---

1. Align the dials to your set 4-digit combination.
2. Pull the shackle upwards to release it from the main body.
3. The front cover of the box will swing open, revealing the storage compartment.

2. Close the front cover firmly until it clicks into place.
3. Insert the shackle back into the main body of the lock box. Ensure it is fully seated.

## Attaching the Key Box

The shackle design allows for versatile attachment to various fixed objects:

- **Vehicle Undercarriage:** Ideal for securing keys when engaging in outdoor activities like surfing or swimming. The shackle can be attached to a sturdy part of the vehicle's undercarriage, such as a towing eye.
- **Fences and Gates:** Easily attachable to fence posts, gate handles, or railings for temporary or permanent key access.
- **Door Handles:** Can be hung on most standard door handles or fixed wall mounts for convenient access.

## Maintenance

The ARREGUI Keeper is constructed from durable zinc and steel alloy, designed to withstand various elements. To ensure its longevity and smooth operation:

- **Cleaning:** Wipe the exterior with a damp cloth to remove dirt and grime. Avoid abrasive cleaners that could damage the finish or plastic components.
- **Lubrication:** Periodically, apply a small amount of silicone-based lubricant to the shackle mechanism and the combination dials to ensure smooth movement, especially if exposed to harsh weather conditions.
- **Inspection:** Regularly inspect the shackle and body for any signs of wear, damage, or corrosion. Address any issues promptly to maintain security.
- **Environmental Protection:** While designed for outdoor use, prolonged exposure to extreme conditions (e.g., saltwater immersion, extreme temperatures) may accelerate wear. The plastic cover helps protect the number rolls from elements.

## Troubleshooting

- **Lock Will Not Open:**
  - Ensure the correct 4-digit combination is precisely aligned in the center of the viewing window.
  - Gently jiggle the shackle while entering the combination to ensure no internal components are stuck.
  - If the combination was recently changed, double-check that you are using the new combination.
  - If the combination is forgotten, the lock cannot be opened non-destructively.
- **Dials Are Stiff or Hard to Turn:**
  - Clean the dials and surrounding areas to remove any accumulated dirt or debris.
  - Apply a small amount of silicone lubricant to the dial mechanism.
- **Shackle Is Difficult to Insert/Remove:**
  - Ensure the combination is correctly set to the opening code.
  - Check for any obstructions or damage to the shackle or the shackle opening.
  - Apply lubricant to the shackle insertion point.
