3. OPERATING INSTRUCTIONS

This section provides general guidance on the proper use of the tools included in your set. Always use the correct tool for the task and follow safety precautions.

General Tool Usage:

- **Measuring Tape:** Extend the tape to measure lengths. Ensure the tape is taut and straight for accurate readings. The 5-meter length is suitable for most household measurements.
- **Hammer:** Use for driving nails or light demolition tasks. Always wear appropriate safety glasses. Hold the hammer firmly and strike squarely.
- **Pliers (Combination & Long Nose):** Use combination pliers for gripping, bending, and cutting wires. Long nose pliers are ideal for reaching into tight spaces, bending small loops, or holding small objects.
- **Screwdrivers (Bit & Fixed):** Select the correct screwdriver tip (Phillips, flathead, etc.) and size that matches the

screw head. Insert the tip firmly into the screw head and turn clockwise to tighten, counter-clockwise to loosen. The bit screwdriver allows for quick changes between different bit types.

- **Spirit Level:** Place the level on a surface to check if it is perfectly horizontal or vertical. The bubble in the vial should be centered between the two lines for a level surface.

- **Allen Keys:** Use these hexagonal keys for screws with hexagonal sockets, commonly found in furniture assembly or bicycle maintenance. Select the correct size for a snug fit to prevent stripping the screw head.
- **Hardware Accessories:** The assorted hardware can be used for various fastening and hanging applications. Refer to specific project requirements for appropriate use.

4. MAINTENANCE AND CARE

Proper maintenance extends the life of your tools and ensures their optimal performance.

Maintenance Guidelines:

- **Cleaning:** After each use, wipe down tools with a clean, dry cloth to remove dirt, dust, and moisture. For stubborn grime, a mild detergent solution can be used, followed by thorough drying.

- **Lubrication:** Periodically apply a light coat of machine oil to moving parts of pliers and other hinged tools to prevent rust and ensure smooth operation.
- **Storage:** Always store tools in the provided soft case in a dry environment to prevent rust and corrosion. Keep them away from extreme temperatures and humidity.
- **Inspection:** Regularly inspect tools for signs of wear, damage, or loose parts. Replace or repair damaged tools immediately to ensure safety and effectiveness.

5. TROUBLESHOOTING

Most issues with hand tools can be resolved with simple checks.

Common Issues and Solutions:

- **Tool not gripping/slipping:** Ensure the tool (e.g., pliers, screwdriver) is correctly sized for the fastener or object. Check for wear on jaws or tips.
- **Screwdriver bits falling out:** Ensure the bit is fully inserted and securely locked into the bit screwdriver handle.
- **Rust formation:** Clean tools thoroughly after use and store them in a dry environment. Apply a thin layer of oil to metal surfaces if storing for extended periods in humid conditions.
- **Inaccurate measurements:** Ensure the measuring tape is not bent or damaged and is held straight and taut during use.
