MAINTENANCE

- Flush Not Actuating:**
 - Ensure the buttons are fully depressed.
 - Check if the actuating rods or cables are properly connected to the cistern mechanism.
 - Verify that the cistern itself is functioning correctly and has water.
- Buttons Sticking:**
 - Clean around the buttons to remove any debris or residue.
 - Ensure the plate is not overtightened, which could cause binding.
- Loose Plate:**
 - Gently tighten the mounting screws if accessible. Avoid overtightening.
 - If the issue persists, professional inspection may be required.

For complex issues or internal cistern problems, consult a qualified plumber or contact Viega customer support.
