SETUP

Time Adjustment:

1. **Locate the Crown:** The crown is the small knob on the right side of the watch case.
2. **Pull Out the Crown:** Gently pull the crown outwards until you feel a click. This will stop the watch movement.
3. **Set the Time:** Rotate the crown downwards (clockwise) to adjust the hour and minute hands to the desired time.
4. **Push In the Crown:** Once the time is set, push the crown back into its original position firmly. The watch will resume operation.

A screenshot of a product parameter screen for the SKMEI watch. The screen features a large image of the watch on the left and a list of specifications on the right. The specifications include: CASE: Zinc alloy, MIRROR: Glass mirror, WATCHBAND: Silica gel / PU, W/P: 30 meters waterproof, and 23mm. The screen also displays the SKMEI logo and the word "Parameters" in a stylized font. At the bottom, there are navigation icons and dimensions: 52mm and 23mm.

OPERATING

Water Resistance (30M / 3ATM):

The SKMEI 1208 watch is designed with 30 meters (3ATM) of water resistance. This rating indicates that the watch is suitable for:

- Daily use
- Washing hands
- Exposure to rain
- Swimming in shallow water

Important: This watch is **not** suitable for hot water activities (e.g., hot showers, saunas) or deep-sea diving. Avoid pressing any buttons or operating the crown while the watch is wet or submerged, as this can compromise the water seal.

MAINTENANCE

General Care:

- **Cleaning:** Wipe the watch case and strap regularly with a soft, dry cloth to remove dust and dirt. For silicone or PU straps, a damp cloth can be used, followed by drying.
- **Avoid Chemicals:** Do not expose the watch to harsh chemicals, solvents, or detergents, as these can damage the case, strap, or internal components.
- **Temperature:** Avoid exposing the watch to extreme temperatures, both hot and cold, as this can affect battery life and movement accuracy.
- **Impact:** Protect the watch from strong impacts or drops, which can damage the glass or internal mechanism.

Precautions:

- Do not reverse the watch hand when regulating time. This can cause damage to the movement and reduce its service life.
- Avoid operating the watch's crown or buttons between 9:00 PM and 3:00 AM. Adjusting the time during this period can interfere with the date change mechanism (if applicable) and potentially cause gear damage, shortening the watch's lifespan.

TROUBLESHOOTING

If you encounter any issues with your SKMEI 1208 watch, please refer to the following common troubleshooting steps:

- **Watch Not Running:**
 - Check if the crown is fully pushed in. If it's pulled out, the watch will not run.
 - The battery may be depleted. Quartz watches typically require battery replacement every 1-2 years. Consult a professional watch repair service for battery replacement.
- **Incorrect Time:**
 - Adjust the time as described in the 'Setup' section.
 - Ensure the crown is fully pushed in after setting the time.
- **Condensation Under Glass:**
 - Small amounts of condensation may appear temporarily due to sudden temperature changes but should dissipate quickly.
 - If condensation persists or appears as large droplets, it indicates a breach in the water resistance. Seek professional repair immediately to prevent damage to the movement.

For issues not covered here, please contact your retailer or a qualified watch repair technician.

SPECIFICATIONS

Feature	Detail
Model Number	SKMEI 1208
Movement Type	Japanese Quartz
Case Material	Zinc Alloy with IP Black Plating
Mirror Material	High Hardness Glass
Watchband Material	Silicone or PU (Polyurethane)
