## Jack LaLanne's SLH90

# Jack LaLanne's 100th Anniversary Fusion Juicer SLH90 Instruction Manual

Model: SLH90 | Brand: Jack LaLanne's

## INTRODUCTION

This manual provides essential instructions for the safe and efficient operation, maintenance, and care of your Jack LaLanne's 100th Anniversary Fusion Juicer SLH90. Please read all instructions thoroughly before first use and retain this manual for future reference.

Image: Jack LaLanne's 100th Anniversary Fusion Juicer SLH90. This image displays the assembled juicer, highlighting its stainless steel base and black components, including the wide feed chute and juice spout.

## SAFETY PRECAUTIONS

- Always ensure the juicer is properly assembled and the locking bar is securely in place before operation.
- Do not insert fingers or other utensils into the feed chute while the appliance is operating. Always use the provided food pusher.
- Unplug the juicer from the power outlet before assembling, disassembling, or cleaning.
- Keep hands and hair away from moving parts during operation.
- Do not operate the juicer if any parts are damaged or if the cord is frayed.
- This appliance is for household use only.

## COMPONENTS OVERVIEW

Familiarize yourself with the various parts of your Fusion Juicer:

1. Food Pusher: Used to guide fruits and vegetables into the feed chute.

2. Feed Chute: Wide opening for inserting produce.
3. Cover: Secures the internal components during operation.
4. Filter Basket/Blade: Stainless steel component that grates and separates juice from pulp.
5. Juice Spout: Where extracted juice exits the machine.
6. Pulp Collector: Container that collects the discarded pulp.
7. Motor Base: Houses the powerful 800-watt motor.
8. Locking Bar: Secures the cover and ensures safe operation.
9. On/Off Switch: Controls the power to the juicer.

## SETUP AND ASSEMBLY

---

Before initial use, wash all removable parts in warm, soapy water, rinse thoroughly, and dry. Ensure the motor base is unplugged.

1. Place the motor base on a stable, flat, and dry surface.
2. Insert the pulp collector into its designated slot on the back of the motor base.
3. Carefully place the filter basket/blade assembly onto the motor base, ensuring it is seated correctly.
4. Position the juicer cover over the filter basket, aligning the feed chute with the opening.
5. Lift the locking bar and secure it into the grooves on the sides of the cover until it clicks into place. The juicer will not operate if the locking bar is not properly secured.
6. Place a juice collection container (such as a glass or pitcher) under the juice spout.

## OPERATING INSTRUCTIONS

---

Prepare your fruits and vegetables by washing them thoroughly. Most fruits and vegetables can be juiced whole due to the wide feed chute, reducing preparation time. For larger items, cut them into pieces that fit comfortably into the chute.

1. Plug the juicer into a grounded electrical outlet.
2. Turn the juicer on using the On/Off switch. Allow the motor to reach full speed before adding produce.
3. Gradually feed fruits and vegetables into the feed chute. Use the food pusher to gently guide the produce down. Do not force the produce, as this can strain the motor and reduce juice yield.
4. Observe the juice flowing from the spout into your collection container and the pulp accumulating in the pulp collector.
5. Once all produce has been juiced, turn off the juicer and unplug it from the outlet.

*Tip: The juicer is designed for efficient extraction, resulting in dry pulp, indicating maximum juice yield from your produce.*

## MAINTENANCE AND CLEANING

---

Regular cleaning ensures optimal performance and longevity of your juicer. All removable parts are dishwasher safe, making cleanup convenient.

1. Ensure the juicer is turned off and unplugged before cleaning.
2. Unlock the locking bar and remove the cover, filter basket, and pulp collector.
3. Discard the pulp from the pulp collector.
4. Rinse all removable parts under running water to remove any remaining pulp or juice residue.

- 5. For thorough cleaning, place the removable parts in the dishwasher. Alternatively, wash by hand with warm, soapy water and a non-abrasive brush for the filter basket.
- 6. Wipe the motor base with a damp cloth. Never immerse the motor base in water or any other liquid.
- 7. Allow all parts to dry completely before reassembling or storing.

## TROUBLESHOOTING

If you encounter any issues with your juicer, please refer to the following common troubleshooting tips:

- **Juicer does not turn on:** Ensure the power cord is securely plugged into a working outlet and the locking bar is fully engaged. The juicer has a safety mechanism that prevents operation if not properly assembled.
- **Low juice yield or wet pulp:** This may indicate that produce is being fed too quickly or that the filter basket is clogged. Try feeding produce more slowly and ensure the filter basket is clean before use.
- **Excessive vibration or noise:** Check that the filter basket is correctly seated and not damaged. Ensure the juicer is on a stable, flat surface.
- **Motor stops during operation:** The juicer may have overheated. Turn off the unit, unplug it, and allow it to cool down for at least 30 minutes before resuming use.

For further assistance, please contact customer support.
