## TROUBLESHOOTING

Issue	Possible Cause / Solution
-------	---------------------------

Issue	Possible Cause / Solution
Figure parts detach during transformation.	This is often a design feature to prevent breakage from excessive force. Gently reattach the detached part by aligning it with its connection point and pressing firmly until it clicks into place.
Head mask does not close completely.	Ensure all surrounding parts are correctly aligned and not obstructing the mask mechanism. Apply gentle pressure to close. If the mechanism is faulty, contact customer support.
Loose joints (e.g., hips).	Some figures may have slightly looser joints. This can sometimes be remedied by applying a thin layer of clear nail polish to the ball joint or peg, allowing it to dry completely, and then reassembling. This adds friction.
Fusion cannon spring mechanism fails.	If the internal spring mechanism of the fusion cannon fails, it may not be user-repairable due to small components. Contact customer support for assistance.
