Stromberg Carlson HC-75

Stromberg Carlson HC-75 RV Hose and Cord Caddy User Manual

Model: HC-75

1. INTRODUCTION

The Stromberg Carlson HC-75 RV Hose and Cord Caddy is designed to provide an organized and compact storage solution for your RV's fresh water hoses and electrical power cords. This manual provides instructions for the proper use and care of your caddy to ensure optimal performance and longevity.

2. PRODUCT OVERVIEW

The HC-75 Caddy is a durable, compact organizer for RV essentials. Its design allows for efficient storage and easy access to hoses and cords, helping to maintain a tidy storage area in your recreational vehicle.

Key Features:

- **Space-Saving Design:** Compact dimensions (17" wide x 6.5" tall) optimize storage in limited RV compartments.
- **Generous Capacity:** Accommodates fresh water hoses up to 75 feet long, and both 30A and 50A power cords.
- **Durable Construction:** Made from weather-resistant materials designed to withstand outdoor conditions.
- **Multifunctional:** Suitable for storing various camping gear, including extension cords and ropes.
- **Easy Handling:** Features convenient grab holes for hassle-free transportation.

**PROUDLY MADE
IN THE USA**

17" wide, 6-1/2" tall

3. SETUP AND LOADING INSTRUCTIONS

The HC-75 Caddy requires no assembly. Follow these steps to load your hoses or cords:

1. **Prepare Hose/Cord:** Ensure your fresh water hose or power cord is clean and free of kinks.
2. **Initial Placement:** For hoses, feed one end through the designated opening at the bottom of the caddy. This allows for connection to a water source while the bulk of the hose remains coiled. For power cords, simply begin coiling from one end.
3. **Coiling:** Begin coiling the hose or cord neatly inside the caddy, starting from the outer edge and working inwards. Ensure the coils lie flat to maximize capacity and prevent tangling.
4. **Accessory Storage:** The central compartment of the caddy can be used to store smaller accessories such as water filters, pressure regulators, electrical adapters, or spray nozzles.

4. OPERATING INSTRUCTIONS

Using the HC-75 Caddy simplifies the deployment and retraction of your RV's hoses and cords.

For Fresh Water Hoses:

1. Place the caddy near your RV's fresh water intake and the campground water supply.
2. If one end of the hose is already fed through the bottom, connect it to the campground water supply.
3. Uncoil only the necessary length of hose from the caddy to reach your RV's water intake. Connect the other end.
4. When disconnecting, reverse the process. Coil the hose back into the caddy as you retract it.

For Power Cords:

1. Place the caddy near your RV's power inlet and the electrical pedestal.

2. Uncoil the required length of power cord from the caddy to connect to the electrical pedestal.
3. Connect the other end to your RV's power inlet.
4. When disconnecting, coil the power cord back into the caddy as you retract it.

 **STROMBERG**

Smart Design

Holds up to 75 feet of fresh water hose.

Image 4.1: A user demonstrating the ease of carrying the HC-75 Caddy, which holds a coiled hose.

5. MAINTENANCE

To ensure the longevity of your Stromberg Carlson HC-75 Caddy, follow these simple maintenance guidelines:

- **Cleaning:** Wipe the caddy with a damp cloth to remove dirt, dust, or debris. Mild soap can be used for stubborn stains. Rinse thoroughly and allow to air dry.
- **Storage:** Store the caddy in a cool, dry place when not in use. While designed for outdoor conditions, prolonged exposure to extreme temperatures or direct sunlight when empty may affect its material over time.
- **Inspection:** Periodically inspect the caddy for any signs of wear or damage. Although constructed from durable materials, physical impact can cause cracks.

6. TROUBLESHOOTING

This section addresses common questions or minor issues you might encounter with your HC-75 Caddy.

Issue	Possible Cause	Solution
Hose/Cord does not fit or is difficult to coil.	Hose/cord is too stiff, too large, or not coiled properly.	Ensure the hose/cord is flexible enough for coiling. Start coiling from the outer edge inwards, keeping coils flat. The caddy is designed for hoses up to 75 feet and standard 30A/50A power cords.
Caddy appears unstable when full.	Uneven weight distribution or placement on an unstable surface.	Distribute the hose/cord weight evenly within the caddy. Place the caddy on a flat, stable surface.
Difficulty feeding hose through bottom opening.	Hose end is too bulky or opening is obstructed.	Ensure the hose end is clear of attachments when feeding through. If the hose end is too large, you may need to coil the entire hose inside without using the bottom feed-through feature.

7. SPECIFICATIONS

- **Model:** HC-75
- **Brand:** Stromberg Carlson
- **Material:** Durable, weather-resistant plastic
- **Color:** Gray (Original Version)
- **Dimensions (L x W x H):** 17 x 17 x 6.5 inches
- **Item Weight:** Approximately 1 pound
- **Capacity:** Up to 75 feet of fresh water hose; suitable for 30A and 50A power cords.
- **Installation Type:** Freestanding
- **Operation Mode:** Manual
