MAINTENANCE

Proper maintenance ensures the longevity and performance of your projector:

- **Air Filter Cleaning:** Regularly clean the air filter to prevent dust buildup, which can lead to overheating and reduced performance. Refer to the User Manual CD for specific filter cleaning and replacement procedures.
- **General Cleaning:** Wipe the projector casing with a soft, dry cloth. Do not use liquid or abrasive cleaners, as these can damage the surface. Clean the lens gently with a lens cleaning cloth designed for optical surfaces.

TROUBLESHOOTING

If you encounter issues with your projector, refer to the following common solutions:

- **No Image:** Check all power connections and ensure the projector is powered on. Verify that the correct input source is selected. Confirm that all video cables are securely connected and that the lens cap is removed.
