  - Tap the "Add Device" or "+" icon within the app.
  - Select "Wireless Camera" or "IP Camera" from the device list.
  - Follow the app's instructions for pairing. This often involves scanning a QR code on the camera, connecting to a temporary Wi-Fi hotspot created by the camera, or entering your home Wi-Fi credentials into the app for the camera to connect.
  - Ensure your smartphone is connected to the 2.4GHz Wi-Fi network, as most IP cameras do not support 5GHz Wi-Fi during initial setup.
4. **Configure Settings:** Once the camera is successfully added, you can customize its name, set time zones, and adjust other basic settings within the app.

## 5. OPERATING THE CAMERA

---

### 5.1 Live View

Open the camera app and select your camera from the device list to access the live video feed. From here, you can typically:

- View real-time video.
- Take screenshots or record video manually.
- Use two-way audio (if supported) to speak through the camera.
- Control pan/tilt/zoom (PTZ) functions (if supported).

### 5.2 Recording and Playback

Most IP cameras support various recording methods:

- **Motion Detection Recording:** The camera records automatically when motion is detected. You can usually adjust sensitivity and set recording schedules.
- **Continuous Recording:** The camera records 24/7, typically requiring a microSD card or cloud storage subscription.
- **Scheduled Recording:** Set specific times for the camera to record.

To view recorded footage, navigate to the "Playback" or "History" section within the app. Select the date and time to review events.

### 5.3 Notifications

Enable push notifications in the app settings to receive alerts on your smartphone when motion or sound is detected by the camera.

---

- **Cleaning:** Periodically clean the camera lens and body with a soft, dry, lint-free cloth to ensure clear image quality.

Do not use liquid cleaners directly on the camera.

- **Firmware Updates:** Check the camera app regularly for firmware updates. Keeping your camera's firmware up-to-date ensures optimal performance, security, and access to new features. Follow the app's instructions for updating.
- **Storage Management:** If using a microSD card, ensure it has sufficient space. Format the card periodically through the app to maintain performance. Back up important recordings before formatting.
- **Network Stability:** Ensure your Wi-Fi network is stable and provides adequate signal strength to the camera for uninterrupted operation.

7. TROUBLESHOOTING

Problem	Possible Solution
Camera not powering on	Check if the power adapter is securely connected to the camera and the power outlet. Ensure the power outlet is functional. Try a different power adapter if available and compatible.
Cannot connect to Wi-Fi	Ensure your Wi-Fi network is 2.4GHz (most cameras do not support 5GHz). Verify the Wi-Fi password is entered correctly. Move the camera closer to the Wi-Fi router to improve signal strength. Restart your router and the camera. Perform a factory reset on the camera and try the setup process again.
Poor video quality or lag	Check your internet connection speed. Ensure the camera has a strong Wi-Fi signal. Reduce the video resolution in the camera settings. Clean the camera lens.
App not detecting camera	Ensure the camera is powered on and its indicator light is behaving as expected for pairing mode. Verify your phone is connected to the correct Wi-Fi network (2.4GHz). Restart the app and your phone. Try resetting the camera to factory defaults.

If the problem persists after trying these solutions, please contact customer support.
