## MAINTENANCE

### Cleaning

To clean your headset, use a soft, dry cloth. For ear pads, a slightly damp cloth with mild soap can be used, but ensure they are completely dry before use. Avoid using harsh chemicals or abrasive materials, as these can damage the headset's finish and components.

### Cable Care

Handle the audio cable with care. Avoid sharp bends, twists, or excessive pulling, which can damage the internal wiring. When not in use, coil the cable loosely to prevent tangling and stress on the connectors.

### Storage

Store the headset in a cool, dry place away from direct sunlight and extreme temperatures. If storing for an extended period, consider placing it in its original packaging or a protective case to prevent dust accumulation and physical damage.

## TROUBLESHOOTING

---

### No Sound or Low Volume

- Ensure the 3.5mm audio cable is fully inserted into both the headset and the device.
- Check the volume control dial on the headset and the volume settings on your connected device.
- Test the headset with another device to rule out a device-specific issue.

### Microphone Not Working

- Verify that the detachable boom microphone is securely attached to the headset.
- Ensure the microphone mute button on the headset is disengaged (microphone is not muted).
- Check the microphone input settings on your connected device (e.g., console audio settings, PC sound settings).
- Test the microphone with another application or device.

### Sound Distortion or Static

- Ensure the audio cable is not damaged and is securely connected.
