SETUP AND INSTALLATION

Professional installation is recommended for this product. Ensure all local plumbing codes are followed. Before starting, turn off the main water supply to your home.

Tools and Materials Required:

- Adjustable wrench
- Pipe sealant or Teflon tape
- Screwdriver (Phillips and flathead)
- Safety glasses
- Gloves

Installation Steps:

1. **Prepare the Rough-In Valve:** Ensure the existing rough-in valve is properly secured within the wall. This faucet is designed to work with standard Moen valves.
2. **Install the Tub Spout:** Apply pipe sealant or Teflon tape to the threads of the tub spout pipe extending from the wall. Thread the tub spout onto the pipe, ensuring it is hand-tightened, then use a wrench for a final quarter-turn, being careful not to overtighten.
3. **Install the Handles:**
 - Attach the hot and cold handle assemblies to their respective valve stems. The hot handle typically has a red indicator, and the cold handle a blue indicator.
 - Secure the handles with the provided screws.
 - Place the escutcheon plates over the handles and secure them to the wall.
4. **Install the Showerhead:**
 - Apply pipe sealant or Teflon tape to the threads of the shower arm extending from the wall.
 - Thread the shower arm into the wall fitting and tighten.
 - Thread the showerhead onto the shower arm and tighten by hand.
 - Adjust the angle of the showerhead as desired.
5. **Test for Leaks:** Slowly turn the main water supply back on. Check all connections for leaks. If leaks are present, tighten connections as necessary.

OPERATING INSTRUCTIONS

The Moen 82602 features two distinct handles for controlling hot and cold water flow, allowing for precise temperature adjustment.

Water Flow and Temperature Control:

- **Hot Water:** Turn the handle with the red indicator counter-clockwise to increase hot water flow.
- **Cold Water:** Turn the handle with the blue indicator counter-clockwise to increase cold water flow.

- **Mixing Water:** Adjust both handles simultaneously to achieve the desired water temperature.
- **Turning Off:** Turn both handles clockwise until the water flow stops completely.

MAINTENANCE

Regular cleaning and maintenance will ensure the longevity and optimal performance of your Moen faucet.

Cleaning the Finish:

- Clean the chrome finish with a soft, damp cloth and mild soap.
- Avoid abrasive cleaners, harsh chemicals, or scouring pads, as these can damage the finish.
- Rinse thoroughly with clean water and dry with a soft cloth to prevent water spots.

Showerhead Maintenance:

- Periodically check the showerhead nozzles for mineral buildup.
- To clean, gently rub the rubber nozzles to dislodge any deposits. For stubborn buildup, remove the showerhead and soak it in a solution of equal parts white vinegar and water.

TROUBLESHOOTING

This section addresses common issues you might encounter with your Moen 82602 faucet.

Problem	Possible Cause	Solution
Low Water Flow	Clogged showerhead nozzles or aerator.	Clean showerhead nozzles (see Maintenance). Check for debris in the aerator if applicable.
Leaking from Handles or Spout	Worn O-rings or cartridges. Loose connections.	Tighten connections. Replace worn O-rings or cartridges. Consult a professional plumber if unsure.
Difficulty Turning Handles	Mineral buildup or worn internal components.	Clean around the handle base. If problem persists, the cartridge may need replacement.
Inconsistent Water Temperature	Issues with water heater or supply lines.	Ensure water heater is functioning correctly. Check hot and cold supply lines for blockages.
