Grandstream HT801

Grandstream HandyTone 801 Single-Port Analog Telephone Adapter (HT801) User Manual

1. Product Overview

The Grandstream HT801 is a single-port Analog Telephone Adapter (ATA) designed to provide a high-quality and manageable IP telephony solution for residential and office environments. It enables users to connect traditional analog phones to a Voice over IP (VoIP) network, leveraging advanced VoIP functionality, security, and auto-provisioning options.
Key features include:

- Support for 1 SIP profile through a single FXS port and a single 10/100Mbps Ethernet port.
- TLS and SRTP security encryption technology to protect calls and accounts.
- Automated provisioning options, including TR-069 and XML config files.
- Support for 3-way voice conferencing.

Figure 1.1: Front view of the Grandstream HT801 Analog Telephone Adapter. This image shows the compact black device with the Grandstream logo and illuminated status icons for power, phone, and network.

2. Package Contents

Verify that your package contains the following items:

- Grandstream HT801 Analog Telephone Adapter unit
- Universal Power Adapter
- Ethernet Cable
- Quick Installation Guide (QIG)

3. Physical Description

The HT801 features a compact design with essential ports for connectivity.

Figure 3.1: Rear view of the Grandstream HT801, showing the various ports. From left to right, these include the Ethernet port (blue), Reset button, Micro-USB power input, and FXS phone port (green).

3.1. Ports and Indicators

- **FXS Port (Green):** Connects to an analog telephone.
- **Ethernet Port (Blue):** Connects to your network router or switch.
- **Power Port (Micro-USB):** Connects to the included universal power adapter.
- **Reset Button:** Used to restore factory default settings.
- **LED Indicators:** Front panel LEDs indicate power, network status, and phone line activity.

4. Setup Instructions

4.1. Connecting the HT801

1. Connect a standard analog telephone to the green FXS port on the HT801.
2. Connect the Ethernet cable from the blue Ethernet port on the HT801 to your router or network switch.
3. Connect the universal power adapter to the Micro-USB power port on the HT801, then plug it into a power outlet.
4. Allow the device a few minutes to boot up and obtain an IP address. The LED indicators on the front panel will show status.

4.2. Initial Configuration Access

To configure the HT801, you will need to access its web-based configuration interface. The device typically obtains an IP address via DHCP from your network. You can find the IP address through your router's connected devices list or by using Grandstream's discovery tools.

- Open a web browser and enter the HT801's IP address in the address bar.
- When prompted, enter the username and password. The default username is **admin**. For the password:
    - For HT801 V1 units, the default password is **admin**.
    - For HT801 V2 units, the password is printed on the label on the back of the unit.

4.3. SIP Account Registration

Within the web interface, navigate to the **FXS Port** or **Account** settings to configure your SIP account details provided by your VoIP service provider. This typically includes:

- SIP Server (e.g., sip.yourprovider.com)
- SIP User ID
- Authenticate ID
- Authenticate Password

Ensure all settings match your provider's specifications for successful registration.

5. Operating Instructions

5.1. Making and Receiving Calls

- **To Make a Call:** Pick up the handset of your analog phone. You should hear a dial tone. Dial the desired phone number and wait for the call to connect.
- **To Receive a Call:** When your phone rings, pick up the handset to answer the call.

5.2. 3-Way Voice Conferencing

The HT801 supports 3-way voice conferencing. The exact method to initiate a conference call may vary slightly depending on your phone's features and your VoIP provider's settings, but a common procedure is:

1. Call the first party.
2. Once connected, press the **Flash** button (or equivalent) on your analog phone. You should hear a new dial tone.
3. Dial the second party's number.
4. Once the second party answers, press the **Flash** button again to join all three parties into a conference call.

6. Maintenance

6.1. Firmware Upgrade

Keeping your HT801's firmware updated is crucial for optimal performance, security, and access to new features. Firmware updates are available from the Grandstream website.

- Download the latest firmware for your specific HT801 version (V1 or V2) from the official Grandstream support portal.
- Access the HT801's web interface and navigate to the **Maintenance** or **Upgrade** section.
- Follow the on-screen instructions to upload and install the new firmware. The device will reboot during this process.

6.2. Factory Reset

A factory reset will revert all settings to their default values. This can be useful for troubleshooting or preparing the device for a new configuration.

- With the HT801 powered on, use a paperclip or similar pointed object to press and hold the **Reset** button (located on the rear panel) for approximately 7-10 seconds.
- Release the button when the LED indicators begin to flash rapidly. The device will then reboot with factory default settings.

7. Troubleshooting

Problem	Possible Cause	Solution
No dial tone	◦ Power issue ◦ Network connectivity issue ◦ SIP account not registered ◦ Phone not properly connected	◦ Ensure power adapter is connected and unit is powered on. ◦ Check Ethernet cable connection and network status. ◦ Verify SIP account settings in the web interface and ensure registration status is "Registered". ◦ Ensure analog phone is securely plugged into the FXS port.

Problem	Possible Cause	Solution
Cannot make/receive calls	◦ SIP registration failure ◦ Incorrect dial plan ◦ Firewall/NAT issues	◦ Confirm SIP account is registered. ◦ Review dial plan settings in the web interface. ◦ Ensure necessary ports (e.g., 5060 for SIP, RTP ports) are open or forwarded on your router if NAT is present.
Poor voice quality (echo, choppy audio)	◦ Network congestion ◦ Incorrect codec settings ◦ Jitter/latency	◦ Check your internet connection speed and stability. ◦ Adjust preferred codecs in the web interface (e.g., G.711 for wider bandwidth, G.729 for lower bandwidth). ◦ Ensure Quality of Service (QoS) is configured on your router to prioritize VoIP traffic.
Cannot access web interface	◦ Incorrect IP address ◦ Network issue ◦ Incorrect password	◦ Verify the HT801's IP address. ◦ Ensure your computer is on the same network as the HT801. ◦ Confirm the correct password (admin/admin for V1, label password for V2). Consider a factory reset if locked out.

8. Specifications

Product Dimensions	6 x 4 x 2 inches
Item Weight	3.6 ounces
Model Number	HT801
FXS Ports	1
Ethernet Ports	1 x 10/100Mbps
SIP Profiles	1
Voice Codecs	G.711 (a/u-law), G.723.1, G.729A/B, G.726, iLBC, Opus, G.722 (V2 only)
Security	TLS and SRTP encryption
Provisioning	TR-069, XML config files
Power Input	Micro-USB (5V DC)

9. Warranty and Support

The Grandstream HT801 comes with a standard manufacturer's warranty. For detailed warranty information, please refer to the warranty card included with your product or visit the official Grandstream website.
For technical support, firmware downloads, and additional resources, please visit the Grandstream support portal: www.grandstream.com/support
