SETUP

Unboxing and Initial Inspection

Carefully remove all components from the packaging. Inspect the pedals and cables for any signs of damage. Ensure all parts listed in the packing list (not provided here, but implied) are present before proceeding with installation.

Mounting the Pedals

The ClubSport Pedals v3 are designed for stable mounting to a racing cockpit or pedal stand. It is highly recommended to mount the pedals securely to prevent movement during use, especially given the strong force feedback of the brake pedal.

1. Position the pedal set on your desired mounting surface.
2. Align the mounting holes on the pedal base with the corresponding holes on your cockpit or stand.
3. Secure the pedals using appropriate bolts and nuts (not included, typically provided with cockpit/stand). Ensure all fasteners are tightened firmly to prevent any flex or movement.

Connecting to Your System

Connect the pedal set to your Fanatec wheelbase or directly to your PC via USB. Refer to your wheelbase manual for specific connection instructions if connecting through the wheelbase.

- For PC connection: Use the provided USB cable to connect the pedal set directly to an available USB port on your computer.
- For Console/Wheelbase connection: Connect the pedal set to the dedicated pedal port on your Fanatec wheelbase.

Driver Installation and Calibration (PC Only)

For PC users, it is essential to install the latest Fanatec drivers and firmware. These can be downloaded from the official Fanatec website (fanatec.com/us-en/driver).

1. Download and install the latest Fanatec driver package.
2. Follow the on-screen instructions to update the pedal firmware if prompted.
3. Open the Fanatec control panel to calibrate the pedals and adjust settings such as brake force, dead zones, and vibration intensity.

OPERATING THE PEDALS

General Use

The Fanatec ClubSport Pedals v3 are designed for intuitive use in racing simulations. The accelerator, brake, and clutch pedals respond to pressure and position, translating your inputs into the game.

Adjusting Pedal Feel

The pedals offer extensive adjustability to fine-tune the feel to your preference:

- **Brake Pedal:** The pressure-sensitive brake pedal can be adjusted for stiffness using the included elastomers and springs. Experiment with different combinations to find your preferred resistance.
- **Accelerator and Clutch:** The resistance of the accelerator and clutch pedals can be adjusted by changing the spring tension or position.
- **Pedal Position:** The position of each pedal plate can be adjusted horizontally and vertically to optimize ergonomics.

Vibration Motors

The vibration motors on the throttle and brake pedals provide tactile feedback, simulating tire slip and lock-up. This feature can be configured and enabled/disabled through the Fanatec control panel on PC or through compatible game settings on consoles.

MAINTENANCE

Regular maintenance ensures the longevity and optimal performance of your ClubSport Pedals v3.

- **Cleaning:** Use a soft, dry cloth to wipe down the pedals and base. Avoid abrasive cleaners or solvents that could damage the finish.
- **Lubrication:** Periodically check moving parts for smooth operation. Apply a small amount of silicone-based lubricant to pivot points if any squeaking or stiffness is observed. Avoid oil-based lubricants.
- **Cable Management:** Ensure all cables are neatly routed and not pinched or under excessive tension to prevent damage.
- **Fastener Check:** Periodically check all mounting bolts and screws for tightness, especially if the pedals are frequently moved or subjected to intense use.

TROUBLESHOOTING

Pedals Not Responding

- **Check Connections:** Ensure all cables (USB or wheelbase connection) are securely plugged in at both ends.
- **Power Cycle:** Disconnect and reconnect the pedals. If connected to a wheelbase, power cycle the wheelbase and console/PC.
- **Driver/Firmware (PC):** Verify that the latest Fanatec drivers are installed and the pedal firmware is up to date. Reinstall drivers if necessary.
- **USB Port:** Try connecting to a different USB port on your PC. Avoid using unpowered USB hubs.

Vibration Motors Not Working

- **Software Settings:** Ensure vibration feedback is enabled in the Fanatec control panel (PC) or within the game settings.
- **Game Compatibility:** Confirm that the game you are playing supports vibration feedback for pedals.
- **Driver/Firmware:** Ensure drivers and firmware are current.

Excessive Pedal Movement / Base Lifting

- **Secure Mounting:** This issue often arises from insufficient mounting. Ensure the pedal set is firmly bolted to a stable cockpit or stand. If using on a floor, consider a non-slip mat or a dedicated pedal plate.
- **Brake Stiffness:** The brake pedal can be very stiff. If it causes the base to lift, consider adjusting the elastomers to a softer configuration or ensuring your mounting solution can withstand the force.
