2. SAFETY INFORMATION

Adherence to all safety guidelines is crucial for proper installation and safe operation of your SafeRacks storage system. Failure to follow these instructions may result in property damage, injury, or death.

- **Weight Capacity:** Do not exceed the maximum load capacity of 500 pounds. Distribute weight evenly across the rack surface.
- **Structural Integrity:** Ensure the installation location has adequate structural support (e.g., ceiling joists) capable of holding the rack's weight plus its maximum load. Consult a professional if unsure.
- **Installation:** Professional installation is highly recommended. If self-installing, ensure all fasteners are securely tightened and follow all steps precisely.
- **Clearance:** Maintain adequate clearance around the rack to prevent accidental contact with vehicles or other objects.
- **Children and Pets:** Keep children and pets away from the installation area and the rack during loading/unloading.
- **Tools:** Use appropriate safety gear, including eye protection, during installation.
