SETUP INSTRUCTIONS

Connecting the Keyboard

1. Locate an available USB port on your computer.
2. Plug the USB connector of the Logickeyboard into the USB port.
3. Your computer should automatically detect and install the necessary drivers. No additional software is required.
4. The keyboard is now ready for use.

System Compatibility

This keyboard is compatible with the following Microsoft Windows operating systems:

- Windows 2000
- Windows XP
- Windows Vista
- Windows 7
- Windows 8

OPERATING YOUR KEYBOARD

Basic Use

The Logickeyboard XL Print functions as a standard QWERTY keyboard. Its primary advantage is the large, high-contrast yellow characters on black keys, which significantly improve readability. Simply type as you would on any conventional keyboard.

USB Hub Functionality

The keyboard includes two integrated USB 2.0 ports. These ports can be used to connect other low-power

USB devices, such as a mouse, USB flash drive, or other peripherals, directly through your keyboard for convenient access.

MAINTENANCE

To ensure the longevity and optimal performance of your Logickeyboard, follow these simple maintenance guidelines:

- **Cleaning:** Use a soft, slightly damp cloth to wipe the surface of the keyboard. Avoid using harsh chemicals, abrasive cleaners, or excessive moisture, as these can damage the keys or electronics.
- **Dust Removal:** Use compressed air to remove dust and debris from between the keys.
- **Storage:** Store the keyboard in a clean, dry environment away from extreme temperatures and direct sunlight when not in use.

TROUBLESHOOTING

If you encounter issues with your Logickeyboard, please try the following steps:

- **Keyboard Not Responding:** Ensure the USB cable is securely plugged into both the keyboard and the computer. Try plugging the keyboard into a different USB port on your computer.
- **Keys Not Working:** Check for any physical obstructions under the keys. If the issue persists, try restarting your computer.
- **USB Hub Devices Not Working:** Ensure the devices connected to the keyboard's USB hubs are properly connected and do not require more power than the hub can provide. Try connecting the device directly to your computer's USB port to rule out the device itself as the source of the problem.
- **Intermittent Connection:** Ensure the USB cable is not damaged or kinked.

If these steps do not resolve the issue, please refer to the support section for further assistance.
