waveshare 2.13inch e-Paper HAT

Waveshare 2.13-inch E-Ink Display HAT V4 User Manual

MODEL: 2.13INCH E-PAPER HAT

Introduction Package Content Setup Operating Maintenance Troubleshooting Specifications
Support

1. Introduction

The Waveshare 2.13-inch E-Ink Display HAT V4 is a low-power, high-resolution display module designed for Raspberry Pi and other microcontrollers. It features a 250x122 pixel resolution and communicates via an SPI interface, supporting partial refresh capabilities. This display is ideal for applications requiring clear, persistent visuals with minimal power consumption, such as electronic shelf labels, industrial instruments, and information displays.

Key Features:

- **2.13-inch E-Ink Display:** Provides a clear, paper-like visual experience.
- **250x122 Resolution:** Offers crisp text and graphics.
- **SPI Interface:** Enables communication with various microcontrollers.
- **Partial Refresh Support:** Allows for faster updates of specific screen areas.
- **Ultra-Low Power Consumption:** Power is primarily required only during screen refreshes.
- **No Backlight:** Maintains display content indefinitely without power, offering wide viewing angles.
- **Standard Raspberry Pi 40PIN GPIO Extension Header:** Compatible with Raspberry Pi series boards and Jetson Nano.
- **Onboard Voltage Translator:** Ensures compatibility with 3.3V/5V MCUs.

Official product video demonstrating the features and applications of the Waveshare 2.13-inch e-Paper HAT, including its low power consumption, wide viewing angle, and compatibility with Raspberry Pi and other microcontrollers.

2. Package Content

Verify that all items listed below are included in your package. If any items are missing or damaged, please contact customer support.

2.13" E-Paper HAT

Partial Refresh Support, Low Power, Wide Viewing Angle, Paper-Like Effect

Ideal for shelf labels, industrial instruments...

This image displays the standard package contents for the 2.13-inch E-Paper HAT. Ensure you have received all components.

Included Items:

- 1x 2.13inch e-Paper HAT
- 1x PH2.0 20cm 8Pin Cable
- 1x RPi Screws Pack (2pcs)

3. Setup

This section guides you through the physical connection of the E-Ink Display HAT to your host device.

3.1 Connecting to Raspberry Pi

The 2.13-inch E-Paper HAT is designed to directly connect to the 40PIN GPIO header of Raspberry Pi series boards (e.g., Raspberry Pi 5/4B/3B/Zero/Zero W/Zero 2W) and Jetson Nano. Align the HAT carefully with the GPIO pins and press down gently until it is securely seated.

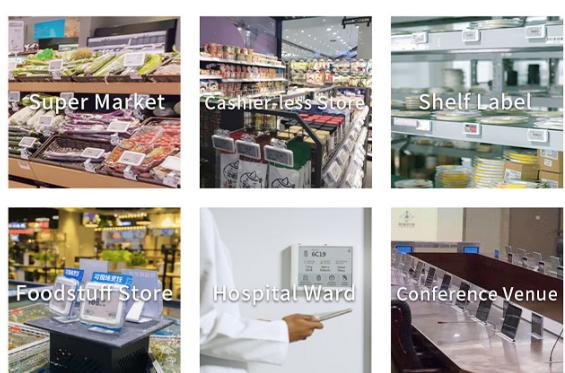

Advantages Of EINK

E-paper display utilizes microcapsule electrophoretic technology for displaying, the principle is: charged particles suspended in clear fluid will move to sides of microcapsule when electric field is applied, making the microcapsule become visible by reflecting ambient light, just as traditional printed paper. E-paper display will clearly display images/texts under lamplight or natural light, requires no backlight, and features nearly up to 180° viewing angle. It is usually used as e-reader due to its paper-like effect.

Application Examples

Suitable For Pass/Equipment Tags, Shelf Labels, Conference Name Tags...

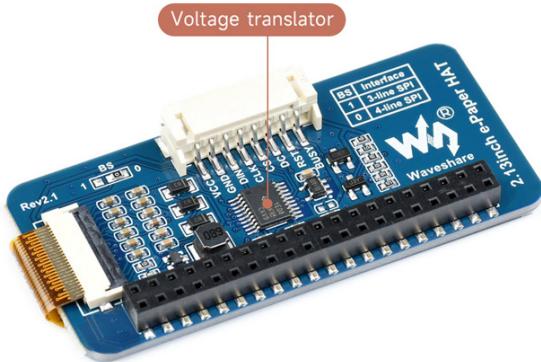

The e-Paper HAT connected to a Raspberry Pi. The Raspberry Pi is not included.

3.2 Connecting to Other Microcontrollers (e.g., Arduino/STM32)

For other controller boards that do not have a direct HAT interface, you can use the provided PH2.0 8Pin cable to connect via the SPI interface. The HAT includes an onboard voltage translator, making it compatible with both 3.3V and 5V microcontrollers.

Onboard Voltage Translator

Compatible With 3.3V / 5V MCUs

Standard Raspberry Pi 40PIN GPIO Header

Compatible With Raspberry Pi Series Boards, Jetson Nano

for reference only, the Raspberry Pi in the picture is NOT included

Detailed view of the onboard SPI control interface and voltage translator for connecting to various MCUs.

Refer to the pinout table below for correct wiring:

Pin	Description
VCC	3.3V/5V Power Supply
GND	Ground
DIN	SPI MOSI pin
CLK	SPI SCK pin
CS	SPI chip selection, low active
DC	Data / Command selection (high for data, low for command)
RST	External reset, low active
BUSY	Busy status output (high for busy)

4. Operating the E-Ink Display

The Waveshare 2.13-inch E-Ink Display operates by arranging charged particles in microcapsules. When an electric field is applied, these particles move to become visible, reflecting ambient light. This technology provides a paper-like display that is clear and readable in various lighting conditions without requiring a backlight.

4.1 Display Refresh

The display supports both full and partial refresh modes. Full refresh clears the entire screen and redraws the content, typically taking longer but ensuring a completely clean display. Partial refresh updates only the changed

areas, resulting in faster updates and reduced power consumption, suitable for dynamic content like sensor readings or notifications.

4.2 Power Consumption

E-Ink displays are known for their ultra-low power consumption. Power is primarily consumed only during the screen refresh cycle. Once an image is displayed, it remains visible without any further power input, making it highly energy-efficient for static information displays.

4.3 Programming and Examples

Waveshare provides extensive online documentation and example code for various platforms, including Raspberry Pi, Jetson Nano, Arduino, and STM32. These resources include driver board circuit diagrams and demo programs to help you get started with programming the display. Please refer to the official Waveshare online user manual for detailed programming guides and examples.

5. Maintenance

To ensure the longevity and optimal performance of your Waveshare 2.13-inch E-Ink Display HAT, follow these maintenance guidelines:

- **Cleaning:** Gently wipe the display surface with a soft, dry, lint-free cloth. Avoid using abrasive materials, solvents, or chemical cleaners, as these can damage the screen.
- **Handling:** Handle the display by its edges. Avoid applying excessive pressure to the screen surface, which can cause damage.
- **Storage:** Store the display in a cool, dry environment, away from direct sunlight and extreme temperatures.
- **Environmental Conditions:** Operate the display within its specified temperature and humidity ranges to prevent malfunction.
- **Power Management:** While E-Ink displays retain content without power, frequent power cycling or improper shutdown procedures can potentially impact performance over time.

6. Troubleshooting

If you encounter issues with your Waveshare 2.13-inch E-Ink Display HAT, consider the following troubleshooting steps:

- **Display Not Refreshing:**

- Check all physical connections, especially the SPI interface and power supply.
- Ensure your code is correctly initializing the display and sending refresh commands.
- Verify that the power supply to your host board (Raspberry Pi, Arduino, etc.) is stable and sufficient.

- **Garbled or Incomplete Display:**

- Confirm that the SPI communication lines (MOSI, SCK, CS, DC, RST, BUSY) are correctly wired and not loose.
- Check for any software errors in your display driver or application code.

- Perform a full refresh to clear any residual image data.

- **No Display at All:**

- Ensure the HAT is properly seated on the Raspberry Pi GPIO header or that all wires are connected correctly if using a different MCU.
- Verify that the host board is powered on and functioning.
- Check for any short circuits or damage to the HAT.

- **Compatibility Issues:**

- Confirm that your host microcontroller's voltage (3.3V or 5V) is compatible and that the onboard voltage translator is functioning correctly.
- Ensure you are using the correct drivers and libraries for your specific host platform and the V4 version of the display.

For further assistance, consult the online user manual and resources provided by Waveshare, or contact their technical support.

7. Specifications

Detailed technical specifications for the Waveshare 2.13-inch E-Ink Display HAT V4:

Features At A Glance

- No backlight, keeps displaying last content for a long time even when power down
- Ultra low power consumption, basically power is only required for refreshing
- Standard Raspberry Pi 40PIN GPIO extension header, supports Raspberry Pi series boards, Jetson Nano
- SPI interface, for connecting with controller boards like Arduino/STM32, etc.
- Onboard voltage translator, compatible with 3.3V / 5V MCUs
- Comes with online development resources and manual (driver board circuit diagram, examples for Raspberry Pi/Jetson Nano/Arduino/STM32)

Specifications

OPERATING VOLTAGE	3.3V/5V	GREY SCALE	2
INTERFACE	3-wire SPI, 4-wire SPI	PARTIAL REFRESH TIME	0.3s
OUTLINE DIMENSIONS	65 × 30.2mm	FULL REFRESH TIME	2s
DISPLAY SIZE	48.55 × 23.71mm	REFRESH POWER	26.4mW (typ.)
DOT PITCH	0.194 × 0.194mm	STANDBY CURRENT	<0.01uA (almost none)
RESOLUTION	250 × 122 pixels	VIEWING ANGLE	>170°
DISPLAY COLOR	black, white		

Overview of the display's features and technical specifications.

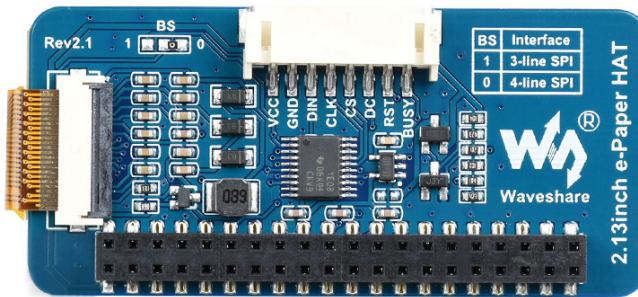

Feature	Value
Standing Screen Display Size	2.13 Inches
Item Model Number	2.13inch e-Paper HAT
Item Weight	0.352 ounces
Product Dimensions (LxWxH)	7.09 x 3.94 x 3.54 inches
Color	2.13inch e-Paper HAT
Operating Voltage	3.3V/5V

Feature	Value
Interface	3-wire SPI, 4-wire SPI
Outline Dimensions	65 x 30.2mm
Display Size	48.55 x 23.71mm
Dot Pitch	0.194 x 0.194mm
Resolution	250 x 122 pixels
Display Color	Black, White
Grey Scale	2
Partial Refresh Time	0.3s
Full Refresh Time	2s
Refresh Power	26.4mW (typ.)
Standby Current	<0.01uA (almost none)
Viewing Angle	>170°

Outline Dimensions Diagram:

Onboard SPI Control Interface

For Use With Other Controller Boards Like STM32/Arduino

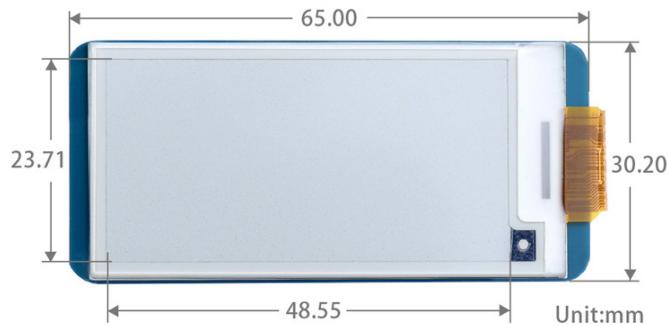

VCC	3.3V/5V
GND	Ground
DIN	SPI MOSI pin
CLK	SPI SCK pin
CS	SPI chip selection, low active
DC	Data / Command selection (high for data, low for command)
RST	External reset, low active
BUSY	Busy status output (high for busy)

8. Application Examples

The Waveshare 2.13-inch E-Ink Display HAT is suitable for a wide range of applications due to its unique characteristics:

Outline Dimensions

Visual examples of the e-Paper HAT in various real-world applications.

- **Electronic Shelf Labels:** Ideal for displaying product information and pricing in retail environments.
- **Industrial Instruments:** Suitable for displaying data in low-power or harsh industrial settings.
- **Asset/Equipment Tags:** For tracking and identifying assets with persistent information.
- **Conference Name Tags:** Provides clear, customizable identification for events.
- **Smart Home Displays:** For displaying static information like weather, schedules, or device status.

9. Support and Resources

Waveshare provides comprehensive online resources to assist you with the 2.13-inch E-Ink Display HAT V4. These resources include detailed user manuals, programming examples, and technical documentation.

Online User Manual:

For the most up-to-date information, detailed tutorials, and example code for various platforms (Raspberry Pi, Jetson Nano, Arduino, STM32), please refer to the official Waveshare online user manual. This manual includes driver board circuit diagrams and guides for implementing fast refreshing functions.

You can typically find these resources on the Waveshare product page or their official wiki by searching for "2.13inch e-Paper HAT".

Technical Support:

If you require further technical assistance or have questions not covered in the online documentation, please contact Waveshare customer support through their official website.
