ASSEMBLY INSTRUCTIONS

Assembly is designed to be straightforward. It is recommended to have a friend assist with the setup. All necessary tools are included.

Step 1: Unpack and Identify Parts

Carefully unpack all components and lay them out on a clean, soft surface. Identify each part by its label (if provided) and ensure

all pieces are accounted for.

Step 2: Assemble the Frame Corners

Begin by connecting the four corner pieces to the side rails, then to the front and rear sections. Insert all bolts and tighten them finger-tight initially. Do not fully tighten until the entire frame is assembled.

Step 3: Attach Center Legs and Beam

Attach the center support legs to the side rails, then connect the center beam to the front and back sections. Ensure these supports are properly aligned for maximum stability.

Step 4: Install Slats

Insert the metal cross-slats into their designated slots across the frame. Some slats may have adhesive strips to prevent mattress slippage; peel off the protective layer before placing the mattress.

Step 5: Final Tightening

Once all components are in place and the frame is correctly aligned, fully tighten all bolts using the provided Allen wrenches. Do not overtighten to avoid stripping the threads.

MAINTENANCE

- Regularly check all bolts and connections to ensure they remain tight. Loose connections can lead to squeaking or instability.
- Clean the metal frame with a damp cloth and mild detergent as needed. Avoid abrasive cleaners that could damage the finish.
- If your mattress tends to slide, ensure the anti-slip tape on the slats is clean and functional. Replace with new anti-slip tape or use a mattress gripper pad if necessary.

TROUBLESHOOTING

Squeaking or Wobbling

If the bed frame squeaks or feels wobbly, re-tighten all assembly bolts. Ensure all connections are secure and that the frame is placed on a level surface. Over time, bolts may loosen, requiring periodic re-tightening.

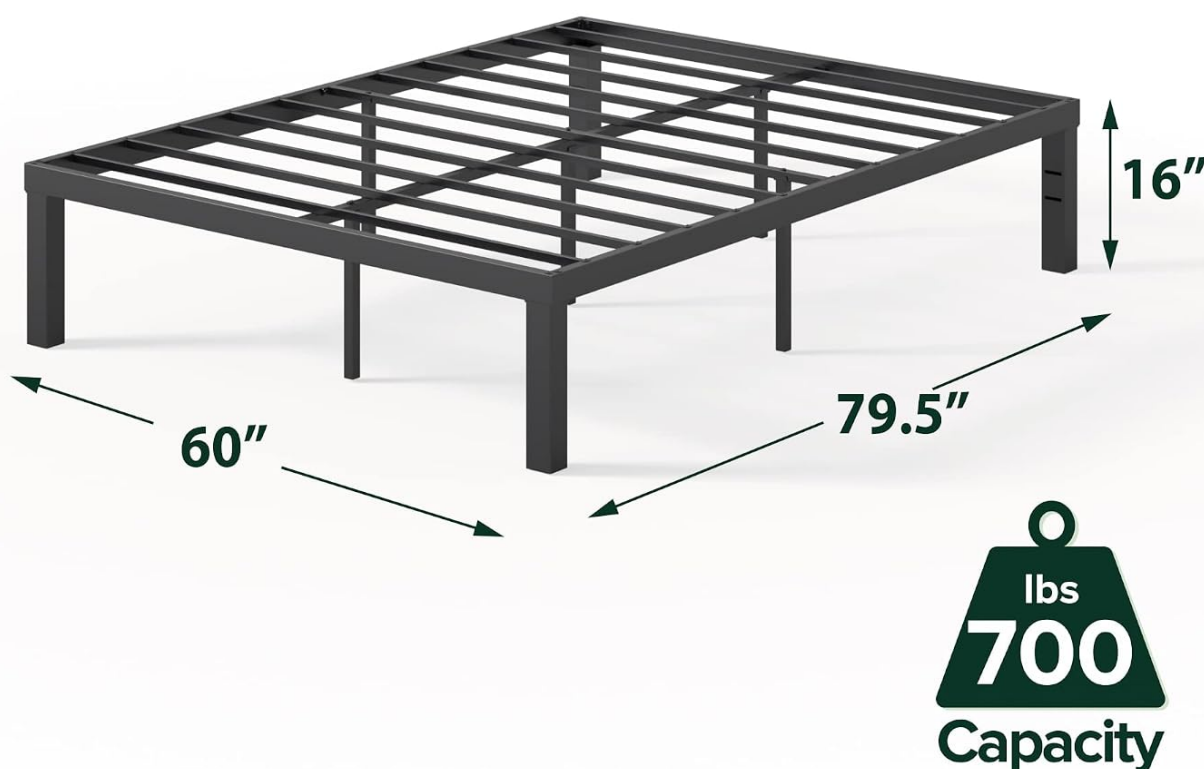

Mattress Sliding

If your mattress slides on the frame, ensure the anti-slip tape on the slats is properly adhered. If the tape has lost its effectiveness, consider applying additional non-slip material or a mattress gripper pad between the mattress and the slats.
