- **Check Mute Button:** Ensure the red LED on the microphone base is illuminated, indicating the microphone is active (not muted).
- **Verify USB Connection:** Disconnect and reconnect the USB cable to ensure a secure connection. Try a different USB port if available.
- · System Settings:
 - Windows: Go to Sound Settings > Input. Select "KLIM Talk" as your input device and adjust the volume level
 - Mac: Go to System Preferences > Sound > Input. Select "KLIM Talk" and adjust the input volume.
 - **Application Settings:** Check the audio input settings within the specific application you are using (e.g., Zoom, Skype, Discord) to ensure the KLIM Talk is selected and its volume is adequate.

6.2 Buzzing or Static Noise

- **Grounding Issues:** If you hear a buzzing sound, it may be related to electrical grounding. Try plugging your laptop or computer into a grounded power strip.
- Extension Cords: Avoid using long or unshielded USB extension cords, as these can sometimes introduce interference. Connect the microphone directly to a USB port on your computer if possible.
- **Interference:** Keep the microphone away from other electronic devices that might cause electromagnetic interference.
