2. Safety Information

To ensure safe operation, always follow these basic precautions:

- Ensure the appliance is properly grounded.
- Do not store explosive substances such as aerosol cans with a flammable propellant in this appliance.
- Do not use mechanical devices or other means to accelerate the defrosting process, other than those

recommended by the manufacturer.

- Do not damage the refrigerant circuit.
- Do not use electrical appliances inside the food storage compartments of the appliance, unless they are of the type recommended by the manufacturer.
- Supervise children to ensure they do not play with the appliance.
- Unplug the refrigerator before cleaning or performing any maintenance.

3. Setup and Installation

3.1 Unpacking

Carefully remove all packaging materials, including tape and protective films. Dispose of packaging responsibly.

3.2 Placement

Position the refrigerator on a firm, level surface away from direct sunlight, heat sources (e.g., oven, radiator), and extreme cold. Ensure adequate ventilation around the appliance. Maintain a minimum clearance of 5 cm (2 inches) from the rear and sides for proper air circulation.

3.3 Leveling

Adjust the front leveling feet to ensure the refrigerator is stable and level. This prevents vibrations and ensures proper door sealing.

3.4 Electrical Connection

Connect the appliance to a dedicated, grounded electrical outlet. Ensure the voltage and frequency match the specifications on the rating plate. Do not use extension cords or multiple adapters.

3.5 Initial Cleaning

Before first use, clean the interior and exterior of the refrigerator with a mild detergent and warm water. Wipe dry thoroughly.

4. Operating Instructions

4.1 Temperature Control

Your Whirlpool refrigerator features a digital temperature control system. The recommended temperature setting for the refrigerator compartment is typically 4°C (39°F). Adjust the temperature using the control panel located inside the appliance or on the door, if applicable.

4.2 No Frost System

This refrigerator is equipped with a No Frost system, which prevents ice build-up in the freezer compartment and reduces the need for manual defrosting. Cold air is circulated to maintain a consistent temperature and humidity, keeping food fresh for longer.

4.3 Food Storage Recommendations

Organize food efficiently to maximize cooling performance and freshness.

- **Shelves:** Use adjustable shelves for various items. Ensure proper air circulation by not overcrowding.
- **Door Bins:** Ideal for bottles, jars, and smaller items.
- **Fresh Box:** The dedicated Fresh Box drawer is designed to maintain optimal humidity for fruits and vegetables, extending their freshness.

4.4 Energy Saving Tips

- Do not open the door frequently or leave it open for too long.
- Ensure the door seals are clean and intact.
- Do not place hot food directly into the refrigerator; allow it to cool to room temperature first.
- Keep the condenser coils at the back of the appliance clean.

5. Maintenance

5.1 Cleaning

Regular cleaning helps maintain hygiene and efficiency.

- **Interior:** Clean with a solution of baking soda and warm water (one tablespoon baking soda to one liter of water). Rinse and dry thoroughly.

- **Exterior:** Wipe with a soft cloth and mild detergent. Avoid abrasive cleaners.
- **Door Seals:** Clean regularly to ensure a tight seal.

5.2 Defrosting

As this is a No Frost refrigerator, manual defrosting of the freezer compartment is generally not required. Any minor frost build-up will be handled automatically by the system. If excessive frost occurs, check door seals for proper closure.

5.3 Power Outage

In case of a power outage, keep the refrigerator door closed to maintain internal temperature for as long as possible. Avoid opening the door unnecessarily.

6. Troubleshooting

Before contacting service, check the following common issues:

Problem	Possible Cause	Solution
Refrigerator not cooling	Power cord unplugged; temperature setting too high; door left open; poor ventilation.	Check power connection; adjust temperature; ensure door is closed; provide adequate clearance.
Unusual noises	Appliance not level; items vibrating inside; compressor noise (normal).	Level the appliance; rearrange items; normal compressor sounds are expected.
Water on floor	Drain tube blocked; door not sealing properly.	Clear drain tube; check and clean door seals.
Door not closing completely	Obstruction; door gasket dirty or damaged; appliance not level.	Remove obstruction; clean/replace gasket; level the appliance.
