TROUBLESHOOTING

If you encounter issues with your C14 to C5 Plug Adapter, consider the following common troubleshooting steps:

Problem	Possible Cause	Solution
Device not receiving power.	Loose connection, power source off, or incompatible voltage/current.	Ensure adapter is fully seated in both the power source and the device's cord. Verify the power source is active. Check device and adapter specifications for compatibility.
Adapter does not fit.	Incorrect connector type.	Confirm that your power source has a C14 inlet and your device's cord has a C5 plug. This adapter is specifically for C14 to C5 conversion.
Adapter feels hot.	Overload or faulty adapter.	Ensure the connected device's power consumption does not exceed the adapter's 10A rating. Discontinue use if overheating persists and replace the adapter.
