This manual provides comprehensive instructions for the installation, operation, maintenance, and troubleshooting of your Salus RT310i Smart Thermostat. Please read this manual carefully before installation and use to ensure safe and efficient operation.

The Salus RT310i is a wireless, internet-controlled thermostat designed to provide precise temperature control for your heating system, offering convenience and energy efficiency through remote access via a smartphone application.

2. SAFETY INFORMATION

Important: Installation should only be carried out by a qualified electrician or competent person. Always isolate the mains supply before commencing any electrical work.

- Ensure the power supply is disconnected before installation or maintenance.
- Do not expose the device to moisture or extreme temperatures.
- Keep out of reach of children.
- Follow all local regulations and safety standards during installation.

3. PACKAGE CONTENTS

Verify that all components are present in the package:

- RT310i Thermostat
- RT310i Receiver
- Internet Gateway (iTG500)
- USB Power Cable and Adapter
- Ethernet Cable

- Quick Start Guide

4. SETUP

4.1. Receiver Installation

The receiver connects directly to your boiler or heating system. It should be installed in a dry, accessible location, away from metal objects that could interfere with the wireless signal.

1. **Isolate Power:** Turn off the mains power supply to your heating system at the consumer unit.
2. **Mount Receiver:** Use the provided screws and wall plugs to securely mount the receiver to a wall.
3. **Wiring:** Connect the receiver to your boiler according to the wiring diagram provided in the Quick Start Guide. Typically, this involves Live, Neutral, and Switched Live connections. *Consult a qualified electrician if you are unsure about wiring.*
4. **Restore Power:** Once wiring is complete and secure, restore the mains power supply. The receiver's LED indicators should illuminate.

No product images were provided for this section. An image showing the receiver's wiring terminals and typical boiler connections would be beneficial here.

4.2. Thermostat Placement

The RT310i thermostat is wireless and can be placed anywhere in your living space. For optimal performance, consider the following:

- Place it in a main living area, away from direct sunlight, drafts, or heat sources (e.g., radiators, TVs).
- Ensure it is at a height of approximately 1.5 meters from the floor.
- Avoid placing it behind curtains or furniture.

No product images were provided for this section. An image illustrating ideal thermostat placement in a room would enhance clarity.

4.3. Internet Gateway (iTG500) Setup

The iTG500 gateway connects your thermostat to the internet, allowing remote control.

1. **Connect Power:** Plug the USB power cable into the iTG500 gateway and then into the power adapter. Plug the adapter into a wall socket.
2. **Connect to Router:** Use the provided Ethernet cable to connect the iTG500 gateway to an available LAN port on your internet router.
3. **Check LEDs:** Once powered, the gateway's LEDs should indicate a successful connection to both power and the internet. Refer to the gateway's specific manual for LED status meanings.

No product images were provided for this section. An image showing the iTG500 gateway connected to a router and power would be helpful.

4.4. Pairing the Devices

The thermostat, receiver, and gateway need to be paired to communicate.

1. **Receiver Pairing Mode:** Press and hold the pairing button on the receiver until its LED starts flashing.
2. **Thermostat Pairing Mode:** On the RT310i thermostat, navigate to the pairing menu (refer to the Quick Start Guide for specific button presses).

3. **Gateway Pairing:** Open the Salus Smart Home app on your smartphone. Follow the in-app instructions to add a new device and pair the gateway. The app will guide you through connecting the thermostat and receiver to the gateway.
4. **Confirmation:** Once successfully paired, the LEDs on the receiver and gateway will indicate a stable connection, and the thermostat will display the current temperature.

No product images were provided for this section. Images showing the pairing buttons on the receiver and thermostat, and screenshots of the app pairing process, would be beneficial.

4.5. App Installation and Account Creation

To control your RT310i remotely, download the Salus Smart Home app.

- Download the "Salus Smart Home" app from the Apple App Store or Google Play Store.
- Create a new user account or log in if you already have one.

No product images were provided for this section. An image showing how to open the thermostat to replace batteries would be helpful.

7. TROUBLESHOOTING

Problem	Possible Cause	Solution
No display on thermostat	Dead batteries	Replace batteries with new ones.
Heating not turning on	Thermostat not paired with receiver. Receiver not powered. Boiler fault. Temperature set too low.	Re-pair thermostat and receiver (see Section 4.4). Check receiver power supply and wiring. Check boiler status and reset if necessary. Increase the set temperature.
Cannot control via app	Gateway not connected to internet. Gateway not powered. App not logged in or device not added.	Check Ethernet cable connection to router and gateway LEDs. Ensure gateway power adapter is plugged in. Log into the app and ensure the RT310i is added to your account.
Inaccurate temperature reading	Thermostat placed in an unsuitable location (e.g., near heat source, draft).	Relocate the thermostat to a more central and stable temperature area (see Section 4.2).
