7. TROUBLESHOOTING

• Device not charging:

- Ensure the charger is securely plugged into a working wall outlet.
- Check if the USB cable is properly connected to both the charger and your device.
- Try using a different USB cable or a different device to rule out cable or device issues.
- Ensure the device is compatible with USB-A charging.

• Slow charging:

- Verify that your device supports 2.1A charging. Some devices may charge slower if they require higher amperage or a specific fast-charging protocol not supported by this charger (e.g., Qualcomm Quick Charge).
- Charging two devices simultaneously will split the total 2.1A output, potentially resulting in slower charging for each device compared to charging a single device.

- Ensure the USB cable is not damaged and is of good quality.

- **Charger feels warm:**

- It is normal for the charger to feel warm during operation. If it becomes excessively hot, unplug it immediately and contact customer support.
