Problem	Possible Cause	Solution
---------	----------------	----------

Problem	Possible Cause	Solution
No power to outlets, switch light is off.	Power strip is not plugged in. Wall outlet has no power. Master switch is off. Internal surge protection tripped.	Ensure the power strip is firmly plugged into a live wall outlet. Test the wall outlet with another device. Check your home's circuit breaker. Press the master On/Off switch to the "On" position. Some units have a reset button (often combined with the switch). If present, press the reset button. If not, unplug all devices, unplug the power strip, wait a few minutes, then plug it back in. If it still doesn't work, the surge protection may be permanently damaged, and the unit needs replacement.
Devices not charging/powering on.	Device is not properly plugged in. Device itself is faulty. Total load exceeds maximum capacity.	Ensure devices are firmly plugged into the power strip. Test the device by plugging it directly into a wall outlet. Unplug some devices to reduce the load.
