- **D-Pad:** Used for directional movement.
- **Start Button:** Typically used to pause games or confirm selections.
- **Action Buttons (A, B, C, X, Y, Z):**These buttons perform in-game actions. Their specific functions depend on the game being played.
- **Mode Button:** On original Sega Genesis 6-button controllers, a "Mode" button is present. This controller is designed to replicate that functionality. For some games or console menus, this button may be necessary.

### Button Configuration (PC/Mac)

When using the controller with a PC or Mac, you may need to configure the buttons within the settings of your game, emulator, or operating system. Refer to the specific software's documentation for detailed button mapping instructions.

## MAINTENANCE

- Keep the controller clean by wiping it with a soft, dry cloth.
- Avoid exposing the controller to extreme temperatures, moisture, or direct sunlight.
- Do not attempt to disassemble the controller, as this may void any potential warranty and could cause damage.
- Store the controller in a safe place when not in use to prevent damage to the cable or buttons.

## TROUBLESHOOTING

- **Controller not responding on Sega Genesis:**
  - Ensure the Genesis plug is fully inserted into the console's controller port.

- Verify the console is powered on.
- Test with another Genesis-compatible controller if available to rule out console issues.
- Confirm your console is not a Sega Genesis Mini or JVC X'eye, as this controller is not compatible with those systems.

- **Controller not responding on PC/Mac:**

    - Ensure the USB plug is fully inserted into a working USB port.
    - Try a different USB port on your computer.
    - Restart your computer.
    - Check your operating system's device manager (Windows) or System Information (Mac) to see if the controller is detected.
    - Verify button mappings within your game or emulator settings.

- **Specific buttons not working:**

    - Ensure the controller is properly connected.
    - Test the controller on a different game or system (Genesis/PC/Mac) to determine if the issue is specific to one setup.
    - If the issue persists across multiple setups, the controller may require service.
