1. **Remote Not Responding:**
    - Check if the batteries are inserted correctly with the correct polarity.
    - Replace old batteries with new ones.
    - Ensure there are no obstructions between the remote and the TV's infrared receiver.
    - Make sure you are within the effective range of the TV's IR receiver.
2. **Certain Buttons Not Working:**
    - Clean the remote's surface, especially around the unresponsive buttons, to remove any dirt or debris that might be preventing proper contact.
    - If only specific buttons are not working, it might indicate a fault with the remote.
3. **Interference:**
    - Bright light sources (like direct sunlight or certain types of fluorescent lights) can interfere with the infrared signal. Try operating the remote in different lighting conditions.
